

CENTER LINE[®]

Resilient Seated Butterfly Valves

Center Line has been a market leader in quarter-turn valves for more than 40 years, and we have earned a reputation as a supplier of superior valves at competitive prices. Our goal is to exceed industry requirements and customer expectations.

We are committed to offering products that meet a wide range of applications and requirements. We continually improve our product line by introducing new products and enhancing existing designs, providing our customers with the best products on the market.

Our complete line of resilient seated butterfly valves provides you with the reliability you need, backed by the guarantee that comes with using valves designed and produced in company-owned manufacturing facilities.

Center Line Resilient Seated Butterfly Valves Product Features

- Qualified for both gaseous and liquid service
- Positive shutoff bi-directionally
- Phenolic backed cartridge seat
- Three-position PTFE bushing standard
- Locking handle standard
- End of line service optional
- Ease of automation
- Field repairable
- Complete size range: 2 through 48 inches

Typical Applications

- HVAC
- Chemical/ Petrochemical Processing
- Food and Beverage
- Power and Utilities
- Pulp and Paper

NOTE: In keeping with our policy of continuing improvement, we reserve the right to institute changes in design, material, dimensions, or specifications without notice and without incurring any obligation to make such changes and modifications on product previously or subsequently sold.

Quality is designed into Series 200, 225, and 250 butterfly valves from Center Line. These valves feature a phenolic-backed cartridge seat and precision-machined parts to assure years of dependable operation.

- Available in sizes 2" to 48".
- Available in Wafer or Lug style body (2" to 30").
- Full flange style body for 36" to 48" valves.
- Wafer body features four alignment holes.
- Pressure ratings for tight shut-off at temperatures up to the maximum limit of the seat material:
 - 2" to 12" — 200 psi, 125 psi for PTFE seat.
 - 14" to 48" — 150 PSI.
- Ideal for on-off or throttling services.
- Available with handles (2" to 12"), manual gear operators (2" to 48"), and electric or pneumatic actuators (2" to 48").
- Refer to Crane actuator bulletin for details of pneumatic and electric actuators.
- Designed to comply with MSS SP-67.
- Compatible with ANSI 125/150 flanges.
- Valves 2" to 20" meet the intent and have passed the AWWA C-504-87 Section 5 proof of design tests.
- Type approval certification from ABS for marine applications (2" to 14").
- Bi-directional dead-end capability to 200 psi (2" to 12") and 150 psi (14" to 24") is available.
- Operators mounted perpendicular to pipe.
- For bolting information, consult the Center Line Installation and Maintenance Manual.

Valve Seating Torques (In-Lbs.) 2" to 30"

36"	40,622	43,480	46,524
40"	68,924	74,048	78,995
42"	69,747	74,632	79,862
48"	96,598	103,837	111,112

All torques shown in these charts were derived from test data using water at 60°F. For torques using dry gases, multiply these numbers by 1.6. For torques involving other media, please consult the factory.

There is no safety factor included in the numbers shown on these charts. For actuator sizing, Crane recommends that these values be multiplied by 1.2 for single valve applications, or 1.5 for 3-way ("tee") applications.

For PTFE seats multiply the numbers shown by 2.0.

Under certain conditions, hydrodynamic torque can meet or exceed seating and unseating torques. When designing valve systems, hydrodynamic torque must be considered to help assure correct selection for the application.

Seat Temperature Ratings

Material	Temperature Ratings °F
Buna-N	+10 to 180
Abrasive Resistant Buna-N	+10 to 180
Neoprene	+20 to 200
EPDM (2" - 16")	-30 to 275
EPDM (18" & Above)	-30 to 225
EPDM, Food Grade (2" - 12")	-30 to 225
Hypalon	0 to 275
Viton	+10 to 275
High Temp. Viton	+10 to 400
PTFE over Buna-N (125 psi, 2" - 12")	+40 to 250
PTFE over Buna-N (75 psi, 2" - 12")	+40 to 275

Although elastomers have an effective operating temperature range, when used in valves, these ranges may have to be modified. The temperature ranges shown in the table have been adjusted accordingly.

For Low Temperature: While the seat materials selected for use in Center Line butterfly valves are capable of withstanding lower temperatures without damage, the durometer of the elastomer is changed. This "hardening" of the seat may increase the operating torque beyond the structural limits of the stem and/or the disc to stem configuration.

For High Temperature: When using High Temperature Viton, the operating pressure of the valve is reduced above 275°F.

L₁ and M₁ refer to Lug style valves, L₂ and M₂ refer to Wafer Style. "C" dimension is listed with elastomer in the relaxed condition. Approximately 1/8" total compression is required for proper sealing with pipe flanges. Valves are designed for installation between ANSI B16.1 Class 125 (Iron) and B16.5 Class 150 (Steel) flanges. Gaskets are not needed, and should not be used since the seat face seals against the mating flange. If the valve is to be installed in plastic or fiberglass flanges, flange rings, or Van Stone style flanges, consult your Center Line agent or the factory for additional information. Center Line recommends that a blind flange be used on end of line applications.

Consult factory for dimension to 2 1/2" and 5" PTFE seated valves. "O" dimension is the valve clearance dimension.

Sizes 2"–30"

*Quantity of 3 pins required for sizes 30" and above

Sizes 36"–48"

Bill of Materials 2" - 30"

Item	Description	Materials	Optional Materials
1	Body	Cast Iron	Ductile Iron
2	Disc	Ductile Iron†	Aluminum Bronze, 316 SS, Monel
3	Seat	Buna-N or EPDM	Neoprene, Hypalon, Viton, PTFE, FDA, Abrasion Resistant
4	Shaft	416 Stainless Steel	316 Stainless Steel, Monel
5	Taper Pin	316 Stainless Steel	Monel
6	Key	Carbon Steel	No Option Available
7	O-Ring	Buna-N	No Option Available
8	Bushing	PTFE	Luberized Bronze
9	Bushing	PTFE	Luberized Bronze
10	Bushing	PTFE	Luberized Bronze

†ENP plated for 2" - 12" valves

Bill of Materials 36" - 48"

Item	Description	Materials	Optional Materials
1	Body	Ductile Iron	No Option Available
2	Disc	Ductile Iron	Aluminum Bronze, 316 Stainless Steel, Monel
3	Upper Shaft	416 Stainless Steel	316 Stainless Steel, Monel
4	Lower Shaft	416 Stainless Steel	316 Stainless Steel, Monel
5	Seat	Buna-N or EPDM	Hypalon, Viton
6	Taper Pin	316 Stainless Steel	Monel
7	O-Ring	Buna-N	No Option Available
8	Key	Carbon Steel	No Option Available
9	Bushing	Luberized Bronze	No Option Available
10	Bushing	Luberized Bronze	No Option Available
11	Thrust Washer	Luberized Bronze	No Option Available
12	End Plate	Ductile	No Option Available
13	O-Ring	Buna-N	No Option Available

- Available in sizes 2" to 24".
- Pressure Rating: 285 psi at 100°F. Pressure/Temperature rating above 100°F corresponds to ANSI B16.5 Class 150 for steel flanges.
- Available in Wafer or Lug style body.
- Wafer body features four alignment holes.
- Available in ANSI Class 300 Lug Body bolt pattern (2"-12").
- Ideal for on-off or throttling services.
- Available with handles (2" to 6"), manual gear operators, electric actuators and pneumatic actuators (2" to 24").
- Refer to Crane actuator bulletin for details of pneumatic and electric actuators.
- Compatible with ANSI B16.1 Class 125 (Iron) and ANSI B16.5 Class 150 (Steel) flanges or optional Class 300 (Steel) Lug only.
- Bi-directional dead-end capability to 200 psi (2" to 12") and 150 psi (14" to 24") is an available option.
- Valves 14" and larger are rated at a maximum 150 psi when a companion flange is not used in dead end service.
- For bolting information, consult the Center Line Installation and Maintenance Manual.

Valve Seating Torques (In-Lbs.)

Valve Size	Standard Disc Differential Pressure				
	50 PSI	100 PSI	150 PSI	200 PSI	285 PSI

18"	13,946	14,688	15,431	16,173	17,434
20"	14,695	15,478	16,260	17,043	18,373
24"	29,738	31,321	32,903	34,486	37,176

All torques shown on the chart were derived from test data using water at 60°F. For torques using dry gases, multiply these numbers by 1.6. For torques involving other media, please consult the factory.

There is no safety factor included in the numbers shown on this chart. For actuator sizing, Center Line recommends that these values be multiplied by 1.2 for single valve applications, or 1.5 for 3-way ("tee") applications.

For PTFE seats multiply the numbers shown on this chart by 2.0.

Under certain conditions, hydrodynamic torque can meet or exceed seating and unseating torques. When designing valve systems, hydrodynamic torque must be considered to help assure correct selection for the application.

Seat Temperature Ratings

Material	Temperature Rating °F
Buna-N	+10 to 180
EPDM (2"-16")	-30 to 275
EPDM (18"-24")	-30 to 225
Abrasive Resistant Buna-N	+10 to 180
Neoprene	+20 to 200
Hypalon	0 to 275
Viton	+10 to 275
High Temperature Viton	+10 to 400

Although elastomers have an effective operating temperature range, when used in valves, these ranges may have to be modified. The temperature ranges shown in the table have been adjusted accordingly.

For Low Temperature: While the seat materials selected for use in Center Line butterfly valves are capable of withstanding lower temperatures without damage, the durometer of the elastomer is changed. This "hardening" of the seat may increase the operating torque beyond the structural limits of the stem and/or the disc to stem configuration.

For High Temperature: When using High Temperature Viton, the operating pressure of the valve is reduced above 275°F.

7	O-Ring	Buna-N	No Option Available
8, 9, 10	Bushing	PTFE	No Option Available

The Center Line Series 300 butterfly valve provides a clean internal profile to ensure sanitary processing of line media. A typical application is as an internal drive valve for the chemical, pharmaceutical, and food and beverage markets.

Mounting Flange:

ISO 5211 mounting flange accommodates direct mounting of all types of actuators, including: handles, gear operators, electric and pneumatic.

O-Ring:

Tertiary stem seal provides further assurance against stem leakage.

Hub Seal:

Smooth finished disc flats mate with seat flats to give a highly efficient primary seal that prevents leakage into the shaft area and minimizes torque.

Disc:

Precision profile provides bubble-tight shut-off, assures minimum torque and longer seat life. Maximum flow is achieved by eliminating the "through shaft" and external disc fasteners.

Weather Seal:

O-ring seals keep dust and moisture from entering the upper stem journal.

Stem:

Stub shaft design allows the disc to float within the flow-way increasing cycle life.

Bushings (4):

Stem bushings reduce torque and isolate the stem from the valve body, preventing seizure of the stem due to corrosion in the stem journal.

Seat Face:

Seat to flange seal eliminates the need for flange gaskets.

Seat:

Phenolic-backed seat is non-collapsible, stretch resistant, blow out proof, and field replaceable.

- Available in sizes 2" to 12".
- Available in Wafer or Lug style body.
- Wafer body features four alignment holes.
- Pressure ratings for tight shut-off at temperatures up to the maximum limit of the seat material:
2" to 12" — 200 psi, 125 psi for PTFE seat.
- Ideal for on-off or throttling services.
- Available with handles, manual gear operators, pneumatic, or electric actuators.
- Refer to Crane actuator bulletin for details of pneumatic and electric actuators.
- Designed to comply with MSS SP-67 and API 609. For valve dimensions, see table on page 6.
- Compatible with ANSI 125/150 flanges.
- Bi-directional dead-end capability to 200 psi available.
- Operators mounted perpendicular to pipe.

Valve Seating Torques (In-Lbs.)

Valve Size	Standard Disc Differential Pressure				Undercut Diff. Press.
	50 PSI ΔP	100 PSI ΔP	150 PSI ΔP	200 PSI ΔP	75 PSI ΔP
2"	100	106	111	117	-
2 1/2"	150	163	176	189	-
3"	207	220	232	244	-
4"	290	323	357	390	-
5"	423	481	540	598	-
6"	599	691	783	875	-

12"	2,568	2,795	3,023	3,250	1,445

All torques shown on the chart were derived from test data using water at 60°F. For torques using dry gases, multiply these numbers by 1.6. For torques involving other media, please consult the factory.

There is no safety factor included in the numbers shown on this chart. For actuator sizing, Center Line recommends that these values be multiplied by 1.2 for single valve applications, and 1.5 for 3-way ("tee") applications.

Under certain conditions, hydrodynamic torque can meet or exceed seating and unseating torques. When designing valve systems, hydrodynamic torque must be considered to help assure correct selection for the application.

Seat Temperature Ratings

Material	Temperature Ratings °F
Buna-N	+10 to 180
Abrasive Resistant Buna-N	+10 to 180
Neoprene	+20 to 200
EPDM	-30 to 275
EPDM (18" & Above)	-30 to 225
EPDM, Food Grade	-30 to 225
Hypalon	0 to 275
Viton	+10 to 275
High Temperature Viton	+10 to 400
PTFE over Buna-N	+40 to 275

Notes:

- Although elastomers have an effective operating temperature range, when used in valves these ranges may have to be modified. The temperature ranges shown in the table have been adjusted accordingly.
- **For Low Temperature:** While the seat materials selected for use in Center Line butterfly valves are capable of withstanding lower temperatures without damage, the durometer of the elastomer is changed. This "hardening" of the seat can increase the operating torque beyond the structural limits of the stem and/or the disc to stem connection.
- **For High Temperature:** When using High Temperature Viton, the operating pressure of the valve is reduced above 275°F.

C_v Values – based on water @70°F with a Specific Gravity of 1.

Size	Disc Position							
	20°	30°	40°	50°	60°	70°	80°	90°
2"	3	7	19	36	63	84	115	120

10"	405	575	850	1200	1900	3300	6100	6450
12"	550	750	1200	1875	2850	5025	9300	9800

Rate of flow through a valve depends upon the pressure drop. The most common method of presenting this information is by C_v. The C_v is the "valve coefficient of flow" and represents the flow of water in gallons per minute (GPM) with a 1 PSI pressure drop through the valve. The higher the C_v, the greater the flow and the better the control characteristics.

- "L₁" and "M₁" refer to Lug style valves, "L₂" and "M₂" refer to Wafer Style.
- "C" dimension is listed with elastomer in the relaxed condition. Approximately 1/8" total compression is required for proper sealing with pipe flanges.
- Valves are designed for installation between ANSI B16.1 Class 125 (Iron) and B16.5 Class 150 (Steel) flanges. Gaskets are not needed, and should not be used since the seat face seals against the mating flange.
- If the valve is to be installed between plastic or fiberglass flanges, flange rings, or Van Stone style flanges, consult your Center Line agent or the factory for additional information.
- Center Line recommends that a blind flange be used on end of line applications.
- "O" dimension is disc chord dimension.
- Consult factory for dimension to 2 1/2" and 5" PTFE seated valves.

Bill of Materials

†ENP plated for 2" - 12" valves

If you want cost-effective backflow protection for your piping systems, look at what the Series 800 from Center Line has to offer. It's the only fully elastomer-lined insert check valve available. The ductile iron valve body is completely isolated from line media which can extend the service life of the Series 800 in most applications and makes it an especially economical alternative in applications which would otherwise require check valves made of expensive alloys.

Fully-Lined Ductile Iron Valve Body:

Maintains full rated pressure. Elastomer lining prevents flow media from contacting the body.

Valve Liner:

Available in several elastomer compounds to meet most corrosive application demands

Liner Face:

Negates the need for flange gaskets.

Plate Travel Stop:

Made of the same material as the valve liner (2" - 12") or 316 Stainless Steel (14" - 24").

Dual Corrosion-Resistant Springs:

Activate the check valve plates and distribute the load force evenly across each plate, ensuring quick sure response.

- Available in sizes 2" to 24".
- Only fully elastomer lined check valve available.
- Bubble-tight shutoff from 25 to 150 psi ΔP . Lower minimum pressure available on request.
- Wide range of available elastomers; Buna-N or EPDM standard.
- Check valves compatible with ANSI B16.1, Class 125 (Iron) or B16.5, Class 150 (Steel) flanges.
- Use of dual springs distributes the load force evenly across each plate, resulting in quick response to flow reversal.

Liner Temperature Ratings

Material	Temperature Ratings °F
Buna-N (Standard)	+10 to 180
EPDM (Standard)	-30 to 275
Neoprene	+20 to 200
Viton	+10 to 400
Hypalon	0 to 275

Some flow media may further restrict the published temperature limits and/or significantly reduce seat life. Consult factory for additional information.

Note: Valve should be installed with shaft in the vertical position in a horizontal pipe. This view rotated 90° for pictorial clarity.

24 (600)	32.25 (819.15)	28.12 (714.37)	25.88 (657.22)	24.12 (612.77)	8.38 (212.72)	29.50 (749.30)	1.31 (33.34)	11.75 (298.45)	22.25 (565.15)	8.50 (215.90)	335 (152.09)

Note: Preferred mounting of check valves of any manufacturer is 8 pipe diameters downstream from the pump discharge or pipe elbow. If this is not feasible, the valve should be mounted downstream as far as possible. This recommendation is not exclusive to Center Line valves, but common practice in valve and piping engineering. Its purpose is to reduce the likelihood of turbulent flow through the valve, which could shorten valve life due to component vibration.

Bill of Materials

Item	Description	Materials	Optional Materials
1*	Valve Body	Ductile Iron	No option available
2*	Liner (Molded to Item 1)	Buna-N or EPDM	Neoprene, Hypalon, Viton
3	Shaft	316 Stainless Steel	Monel
4	Shaft Plug (Qty. 2)	316 Stainless Steel	Monel

9	Set Screw	Carbon Steel	No option available
10	Plate Travel Stop	316 Stainless Steel (14"-24")	No option available

* Items 1 and 2 must be ordered together.

Handles are available for on/off and throttling control of Center Line resilient seated butterfly valves. These handles can be used for manual actuation of 2" to 12" valves at 200 psi and for 2" to 6" valves at 285 psi. For valves larger than 8", excessive operator effort and extreme handle reaction to internal valve forces are possible. In these cases, a gear operator is recommended for safe operation.

Features

The rugged construction of Center Line handles makes them ideally suited for manually actuating smaller valves. The latchplate permits the valve to be locked in any of the 10 positions on DIT handles or in any position on IOL handles.

Specifications

- DIT Mechanically locks the valve in any of the 10 positions from 0° to 90° in 10° increments
- DIT/IOL Can hold the valve in intermediate positions (32°, 68°, etc.) and can also be locked in 0° and 90° positions

Dimensions

Valve Size		A	B	Weight
2-6 in.		2.25	10.14	1.8
50-150 mm		57.15	257.56	0.8
8-12 in.		3.34	14.06	4.0
200-300 mm		84.84	357.12	1.8

Gear operators can be used for on/off and throttling control of Center Line resilient seated butterfly valves. All models are weatherproof and usable for above ground or buried service. For manual operation of valves, gear operators are required for valves 14" and larger and are recommended for valves 8" and larger.

Features

Gear operators from Center Line are 90° manual actuators, and they come with a handwheel, chainwheel, or square nut input device. The durable housing completely encloses the worm gear (on the input shaft) and the segment gear (on the output). Adjustable stops are standard and factory set when installed at the factory. Fully adjustable memory stops are available as an option. A position indicator is standard on all models for above ground service. An optional version is available for buried service applications. Contact customer service for more information.

Specifications

Operation Handwheel or chainwheel (12" standard, others available) or 2" square nut. Input shaft extension available.

Mounting Available with bolt patterns and bore/keyway for direct mount to all 2" through 30" Center Line resilient seated butterfly valves. Dual bolt patterns accommodate different pad designs.

ELECTRIC – ON-OFF**Standard Features:**

Torque Range – 347 lb ins to 17,359 lb ins
 Housing – NEMA 4 & 4X
 Electric Motor – 120 VAC, 1 PHASE, 60 Hz
 Thermal Overload – Auto re-set
 Limit Switches – Adjustable cam operated
 Position Indicator – Mechanical Dial Type
 Space Heater – Located in the control compartment
 Terminal Strip – Pre-wired for motor & limit switches
 Manual Override – Directing acting
 Brake – “Lock-cut” gear arrangement
 Adjustable Mechanical Travel Stops
 Temperature Range – 13°F to 150°F
 Mounting – Direct mount to Crane valves
 Certification/Approvals – CSA-NRTL/C

Optional Features:

AC Voltages – 220VAC, 1 PHASE, 60 Hz
 AC Voltages – 24 VAC 44005 - 44400
 DC Voltages – 12/24 VDC 4005 - 44300
 Additional Limit Switches – 2 SPDT
 Torque Switches – Adjustable open and close
 Feedback Potentiometer – 500 ohm
 Feedback Transmitter – 4-20 mA
 De-clutchable Handwheel Override

**ELECTRIC – MODULATING****Standard Features:**

Process Control Signal – 4-20 mA, 0-10 VDC
 Torque Range – 347 lb ins to 17,359 lb ins
 Housing – NEMA 4 & 4X
 Electric Motor – 120 VAC, 1 PHASE, 60 Hz
 Thermal Overload – Auto re-set
 Resolution – 400 increments through 90 degrees
 Position Indicator – Mechanical Dial Type
 Space Heater – Located in the control compartment
 Terminal Strip – Pre-wired for motor & limit switches
 Manual Override – Directing acting
 Brake – “Lock-cut” gear arrangement
 Adjustable Mechanical Travel Stops
 Temperature Range – 130°F to 1500°F
 Mounting – Direct mount to Crane valves
 Certification/Approvals – CSA-NRTL/C

Optional Features:

AC Voltages – 220VAC, 1 PHASE, 60 Hz
 AC Voltages – 24 VAC 44010M - 44200M
 Torque Switches – Adjustable open and close
 De-clutchable Handwheel Override

PNEUMATIC – DOUBLE ACTING

Standard Features:

Torque Range – 30 in-lbs to 107,531 in-lbs
Housing – Anodized aluminum
Mounting – DIN ISO 5211
Position Indicator – NAMUR standard
Operating Pressure – 40 to 120 PSIG
Temperature Range – -4°F (-20°C) to 176°F (80°C)
Size Range – 14 models to choose from
Adjustable Travel Stops – Both directions
Accessory Interfaces – VDI/VDE 3845 (NAMUR) standard

Optional Features:

Temperature Range – 4°F to 250°F, -40°F to 175°F
Solenoid Valves – 3 or 4 way
Limit Switches – Adjustable cam operated
Positioners – Pneumatic or Electro-pneumatic
DC-1 Dribble Control – Two-stage shutoff
180° Actuation – 2 or 3 position
Manual Override – De-clutchable gear type
Speed Controls – Adjust cycle time
Special Applications – Offshore, nuclear, hygienic, and gas or oil operation

PNEUMATIC – SPRING RETURN

Standard Features:

Torque Range – 42 in-lbs to 77,211 in-lbs
Housing – Anodized aluminum
Mounting – DIN ISO 5211
Position Indicator – NAMUR standard
Operating Pressure – 40 to 120 PSIG
Temperature Range – -4°F (-20°C) to 176°F (80°C)
Size Range – 14 models to choose from
Adjustable Travel Stops – Both directions
Accessory Interfaces – VDI/VDE 3845 (NAMUR) standard

Optional Features:

Temperature Range – 4°F to 250°F, -40°F to 175°F
Solenoid Valves – 3 or 4 way
Limit Switches – Adjustable cam operated
Positioners – Pneumatic or Electro-pneumatic
DC-1 Dribble Control – Two-stage shutoff
180° Actuation – 2 or 3 position
Manual Override – De-clutchable gear type
Speed Controls – Adjust cycle time
Special Applications – Offshore, nuclear, hygienic, and gas or oil operation

VANE

Standard Features:

- Double acting and fail safe versions available
- Housing – Die-cast aluminum
- Operating Pressure – 40 to 120 PSIG
- Temperature Range – 0°F to 225°F
- Powerful actuation in a compact and lightweight package
- Only one moving part
- Dual external travel stops allow rotation adjustment of up to $\pm 10^\circ$ at each end of the stroke
- Fail safe models use a pneumatic accumulator to assure valve closure upon loss of supply pressure
- Stacking two vane actuators enables 180° movement (2 or 3 position)

Optional Features:

- Limit switch
- Locking device
- Breather block
- Dribble control
- Sandwich de-clutchable manual gear override
- Solenoid valve
- Positioners
- PTFE interior coatings
- High or low temperature trim

DOUBLE ACTING

FAIL SAFE

The nomograph on the opposite page gives the relationships of valve size, flow, velocity, and pressure drop for various disc positions.

Sample Calculation, Liquid (see dark green line on chart)

Given:

Water (1.0 specific gravity) at 60° F is flowing through a 6-inch valve at a rate of 1000 gpm.

Find:

Line velocity (ft./sec.) and pressure drop when valve is in full-open (disc at 90°) position.

Solution:

From the 6-inch valve size at lower left of nomograph, go diagonally up to the intersecting horizontal line for 1000 gpm. From that point, proceed directly down to determine line velocity as 11 ft./sec.

For pressure drop, return to the 1000 gpm intersection and continue up vertically to "90° disc open" intersecting diagonal line. From this point, go horizontally to the left to determine pressure drop as 0.5 psi.

Sample Calculation, Gas (see light green line on chart)

Given:

Gas (0.8 lb/cu. ft. density) is flowing through an 8-inch valve at a rate of 1500 cu. ft./min.

Find:

Line velocity (ft./min.) and pressure drop when valve is in full-open (disc at 90°) position.

Solution:

From 8-inch valve size at lower left of nomograph, go diagonally up to the intersecting horizontal line for 1500 cu. ft./min. From that point, proceed directly down to the bottom line of the nomograph to determine line velocity as 4000 ft./min.

For pressure drop, return to the 1500 cu. ft./min. intersection and continue up vertically to "90° disc open" intersecting diagonal line. From this point, go horizontally to the left to determine pressure drop as 17 psi. Now, convert pressure drop to gas by dividing gas density by liquid density and multiplying by 17.

$$\frac{0.8}{62.34} \times 17.0 = 0.22 \text{ psi}$$

General Notes

- Liquid flow data is based on pressure drop and flow rate with viscosity similar to water at 60° F using flow coefficient.
- Velocities for liquids with densities similar to water should be less than 16 ft./sec.
- Nomograph flow rate for gases is in cubic feet per minute (CFM) at flowing conditions. To convert flow rate from standard cubic feet per minute to CFM, use the following formula:

$$\text{CFM} = \frac{(\text{SCFM} \times 14.7) \times (460 + ^\circ\text{F})}{(\text{line pressure, psia}) \times 520}$$

- Gas density in lbs./cu. ft. equals:

$$\frac{\left(\frac{270 \times}{\text{line pressure, psia}} \right) \times \left(\frac{\text{specific gravity of gas (relative to air)}}{460 + ^\circ\text{F}} \right)}$$

Definitions

C_v = Flow coefficient for valves; expresses flow rate in gallons per minute of 60° F water with 1.0 psi pressure drop across valve.

$$C_v = Q \sqrt{\frac{P}{62.4 \Delta P}}$$

K = resistance coefficient.

$$K = d \sqrt{\frac{29.9}{C_v}}$$

P = weight density of fluid, in pounds per cubic foot.

d = internal diameter of Schedule 40 pipe, in inches.

Q = rate of flow, in gallons per minute.

ΔP = differential pressure, in pounds per square inch gauge.
