FV UKG Valve

The Fabricast UKG is a high performance knife gate valve utilizing a three-piece UHMW (Ultra High Molecular Weight) polymer lining. The body of the UKG is available in carbon steel or stainless steel, and is designed and fabricated to meet standard ASME B16.5 and MSS SP-81 class 150 (model FV-150) and class 300 (model FV-300) specifications. Other pressures and configurations can be designed and fabricated according to your needs.

The three-piece liner system provides a bi-directional, drip-tight seal across the gate to it's specified pressure rating. The UHMW polymer is rated to 180° and Teflon is available rated to 400°. The liner pieces are specially designed and cut to fit, then bonded with silicone to insure the right seal. This liner prevents in-line material from coming in contact with the valve body. Other materials are also available, please contact Fabricast Valve for details.

The stainless steel gate resists corrosion and is rated to withstand the specified pressure with minimum deflection. It features precision machined surfaces for smooth actuation and long packing life. The gate is securely contained and protected by the liner so there is no damage from galling.

* The stainless steel stem resists corrosion, and is accompanied by a stainless steel stem nut retainer that protects the stem bushing from harsh environments, and reduces operating torque.

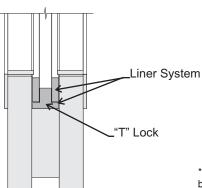

Our Teflon Synthetic Packing is rated standard with a wide Ph range of 3-11, and a temperature rating of up to 500° F.

Converting from the handwheel operator to cylinder, bevel gear, or electric motor is easy and requires no additional welding.

This valve is available in bonneted and non-bonneted styles.

Fabricast Valve

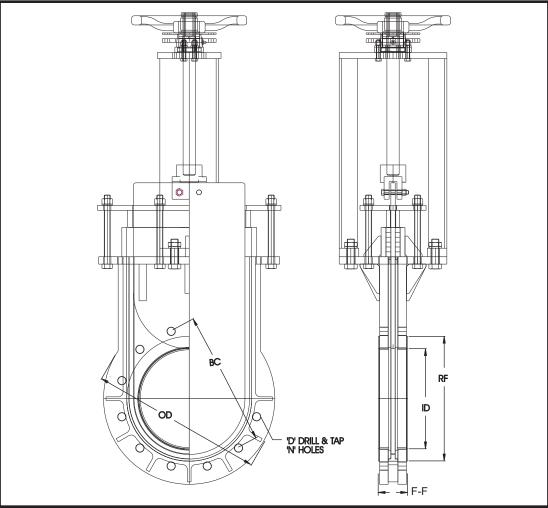

Fabricast Valve Company 2205 Parrott Way Kelso, WA 98626 toll free 1-877-264-2503 phone (360) 425-0306 fax (360) 425-0353 Website: www.knifegates.com

* Available with models that require a threaded stem and stem nut. I.E. Handwheel and bevel gear operated models.
