# Engineering

Vector & Wellheads Engineering Division offer you the best solutions in the following fields:

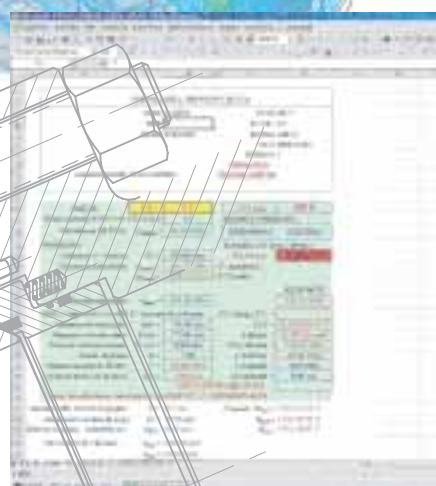

## Engineering

Design of all kind of valves.  
Detail drawings.  
Assembly drawings.  
Calculations.  
NDT procedures, welding, tests, fabrication.  
Technical consulting.  
Process oriented valve and procedures selection.

## Structural analysis

Design, optimization and test of mechanical components (FEA).  
Analysis of installed valves .

## Fluid mechanics

Fluid system analysis.  
Distributions of flow, velocity, pressure, turbulence, pressure drop.  
Steady state and transitional analysis.

# Service division

Formed by a highly qualified and experienced team, our service division is **available on a 24 hour basis** to meet urgent needs, capable of performing jobs at site during:

- Outage and start-up periods
- Installation
- Commissioning
- Supervision

## Activities

Preparing and planning prior to the job:  
detailed studies for scheduling the supply of  
spare parts necessary for the intervention.  
Identification of failures.  
Maintenance, repairs, replacement and test of  
ball, safety, butterfly, gate, check, globe,  
control and pressure-seal valves.  
Maintenance, repairs, replacement and test of  
manual, pneumatic, hydraulic, and electric  
actuators.  
Installation of valve instrumentation.  
Diagnosis of control valves.  
Leakage and functional tests.  
Training courses for maintenance: valves,  
instrumentation and actuators.

# Ball valves

## Features and benefits

**One of the most trusted ball valves in the petroleum and chemical process industries, combines the strength of its components with a dependable and compact design.**

V&W ball valves satisfy a wide range of ASME, ANSI and API standards. Available in cast steel and forged steel, with various trims, they may be specified in sizes from 1/4" to 60", and pressure classes of 150 through 2500.

Engineered for heavy duty, maintenance-free performance, the V&W ball valve is commonly selected for a number of demanding applications.

### Standards and specifications

V&W ball valves are in accordance with API, ASME, ANSI and BS requirements. The following list contains the most important applicable standards for ball valves.

V&W valves may be designed, manufactured and tested in accordance with other international standards upon request.

ASME B16.5, Steel pipe flanges and flange fittings.  
ASME B16.10, Face-to-face and end-to-end dimensions of valves.

ASME B16.25, Butt welding ends.

ASME B16.34, Valves - Flanged, threaded and welding end.

API 6A, Wellhead and christmas tree equipment.

API 6D, Specification for pipeline valves.

API 6FA, Fire test for valves.

API 607, Fire test for soft-seated quarter-turn valves.

MSS-SP-6, Standard finish for contact faces of pipe flanges and connecting-end flanges of valves and fittings.

MSS-SP-25, Standard marking system for valves, flanges, fittings and unions.

MSS-SP-55, Quality standard for steel castings for valves, flanges and fittings and other piping components.

MSS-SP-84, Steel valves - Socket welding and threaded ends.

NACE MR0175, Sulfide stress cracking resistant metallic materials for oilfield equipment.

# Trunnion mounted

## Features and benefits

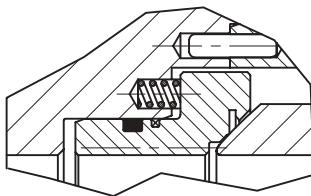

### Actuators

V&W valves are suitable for operation by any type of pneumatic, electric, or hydraulic actuators. We offer factory-mounted valve-actuator packages with single source efficiency, responsibility and warranty.

### Wide selection seat/seal trims

A wide variety of trims are available to match each valve to its application, including metal to metal trims.

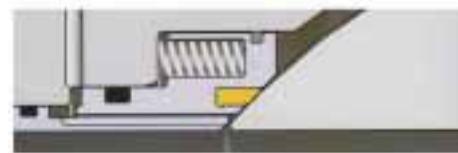

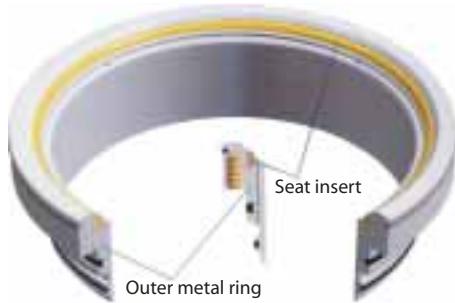

### Metal to metal seated available

### Protected seats for long life

The protected seat design features a deep pocket with a protective lip. This design prevents cold flow of the seat into the line. This results in extended seat life over conventional designs.

The seat assembly consists of an outer metal seat ring with a TFM insert. The TFM insert locates into a groove in the metal ring. A spring assembly behind the seat loads the seat against the ball and prevents leakage from behind the seat. This efficient seat design provides positive shutoff.

### Trunnion design for dependable low torque operation

The large diameter trunnion provides smooth, easy operation and extended bearing life. The trunnion bearings are stainless steel with heavy duty PTFE coated.

# Trunnion mounted

## Features and benefits

### Actuator mounting brackets

Actuator mounting brackets are available as options for users who prefer to install their own actuators. We recommend that buyers specify factory-installed actuators to assure reliable, long life performance and to gain the benefits of V&W *single source responsibility, single source warranty* policy.

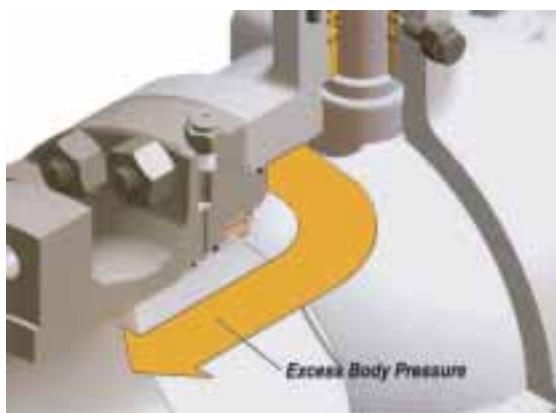

### Bidirectional sealing

V&W trunnion valves are equipped with pressure-actuated seats offering true bidirectional sealing performance.

### Automatic body pressure relief

The pressure actuated seat construction assures positive relief of excess pressure. If the body pressure exceeds the line pressure and seat pre-load pressure, the seat(s) will automatically back off to relieve the excess pressure.

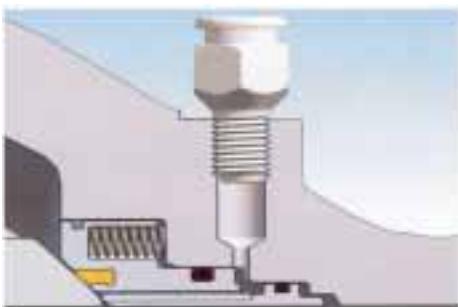

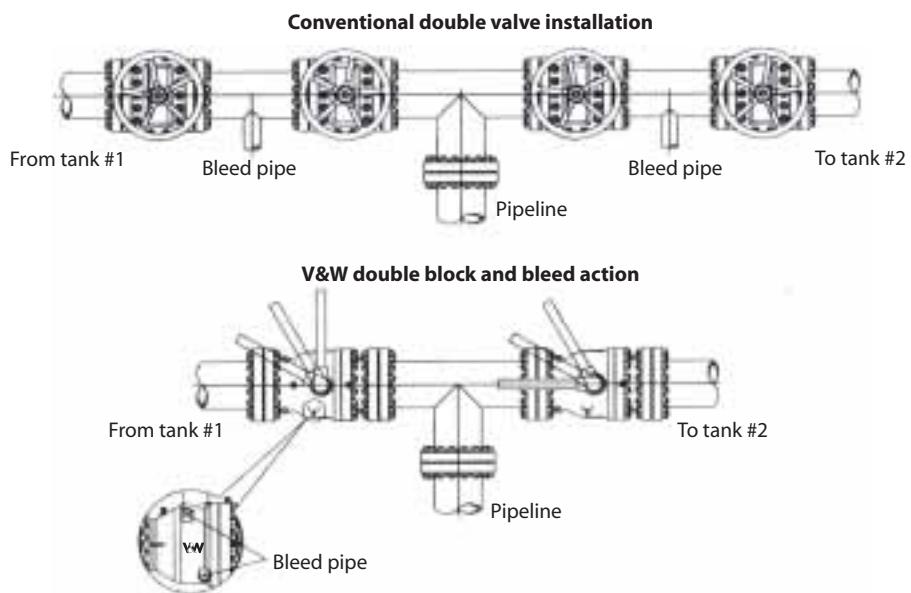

# Trunnion mounted

## Features and benefits

### Double block and bleed

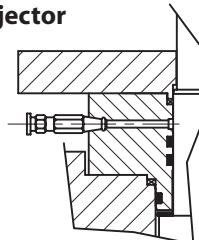

The pressure actuated seats of V&W trunnion valves provide a positive up and downstream seal under all conditions. When used for block and bleed, this feature lets the valve to take the place of two valves, allowing the operator to check the up and downstream sealing by installing a pressure releasing tool to bleed body pressure.

### Grease fittings

Two grease fittings are supplied, providing the ability to inject lubricant into both the upstream and downstream seat pockets.

### Shaft injector

### Easy to maintain

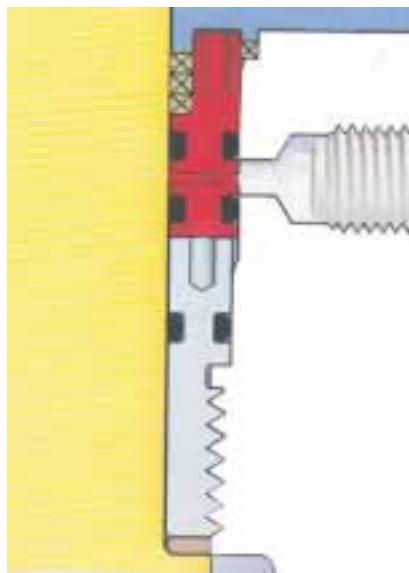

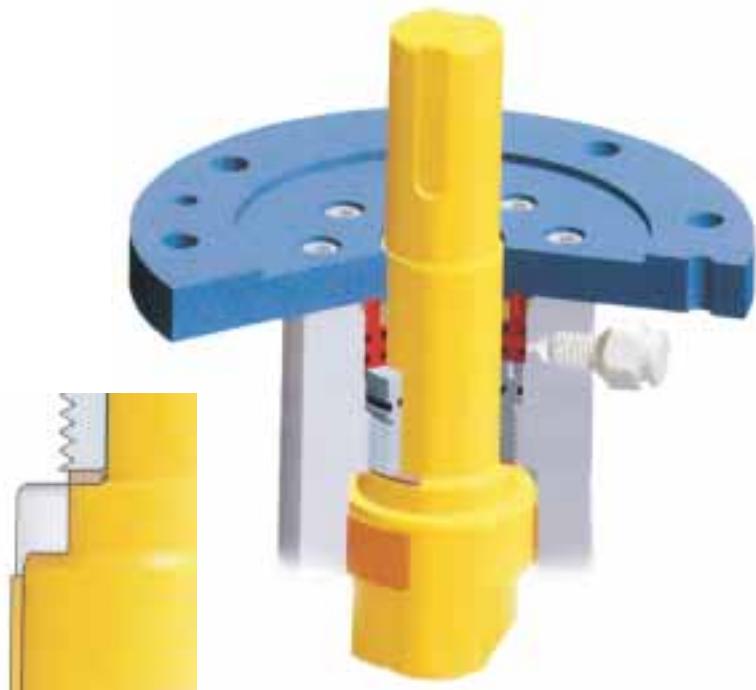

V&W valves can be completely disassembled in the field for replacements of seats or a complete overhaul. Seats can be replaced quickly without the need for special tools.

# Trunnion mounted

## Features and benefits

### Positive stem retention

V&W trunnion mounted ball valves are manufactured with true anti blow out stem. The stem is inserted from within the valve body and is positively retained within the body cavity. This method of stem retention eliminates the need for external locking pins or devices, which may be subjected to inadvertent removal and the subsequent risks. V&W anti blow out stem ensures total safety and integrity.

### Adjustable packing

The stem packing material is graphite. The unique design of the V&W stem packing assembly allows full maintainability of the packing material and replacement of FPM o-rings while the valve is in line and in service. This is achieved by the security of a secondary stem seal located below the packing and upper lantern ring.

1 1/2	130	38	95	270	4.2	91
2×1 1/2	140	38	95	270	3.7	91
2	155	48	100	270	7	125

**ASME Class 2500 dimensional data, mm**

Size inches	A	ØB	E	F	Weight kg	Torque N·m
1/4	95	11	145	78	0.8	12
3/8	95	11	78	145	0.8	12
1/2×1/4	95	11	145	78	0.8	12
1/2	104	14	145	80	1	15
3/4×1/2	104	14	80	145	1	15
3/4	125	20	170	85	2.6	22
1×3/4	125	20	85	170	2.6	22
1	130	25	170	90	5	48
1 1/4×1	130	25	90	170	5	48
1 1/4	155	32	270	95	6	85
1 1/2×1 1/4	155	32	95	270	6	85
1 1/2	180	38	380	135	10	95
2×1 1/2	180	38	135	380	10	95
2	180	48	380	145	12	130

SW valves will be provided, unless otherwise specified, complete with welded plane ends nipples on both sides of the valve.  
Nipples length = 100 mm.

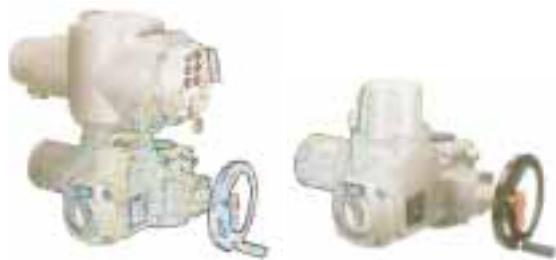

# Ball valve actuators

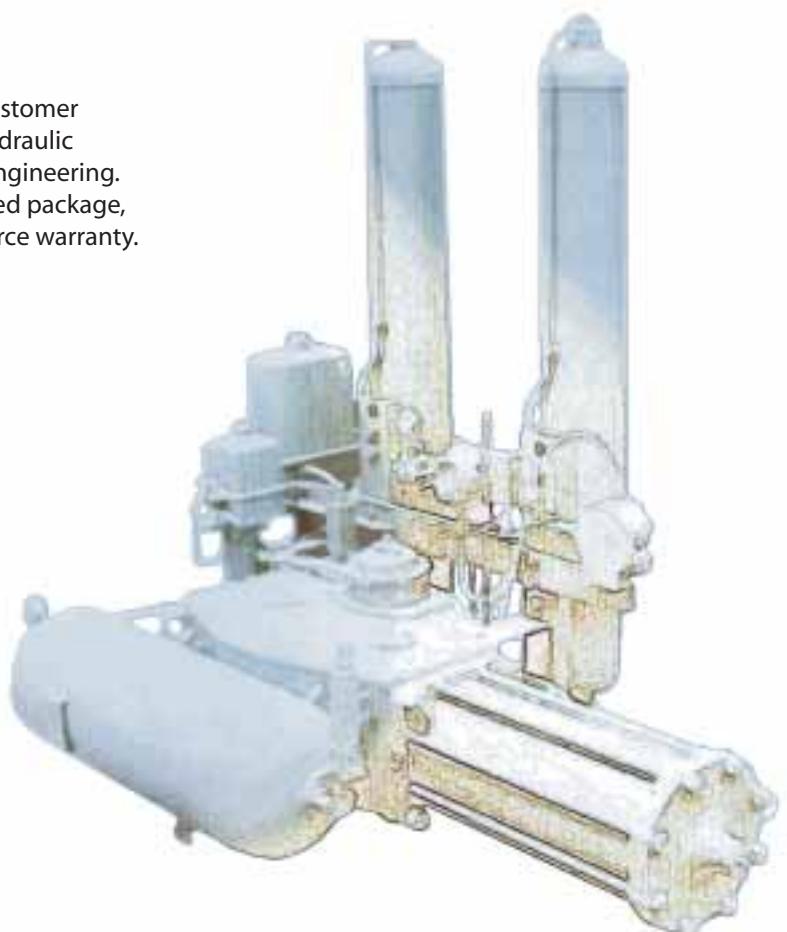

## Features

All types of actuator options are available to suit customer specifications, including electric, pneumatic and hydraulic actuators factory installed by Vector & Wellheads Engineering. With these actuators, we supply the total automated package, offering single source responsibility and single source warranty.

Part-turn actuators for ball valves.  
Actuator/worm gearbox combinations.  
Actuator controls with integral local  
controls are available. The controls can be  
supplied in a variety of versions: parallel  
control or via fieldbus, simple open/close  
functionality or integral PID control

Heavy duty quarter-turn hydraulic actuators. Double  
acting and spring return.  
Control component packages are a part of any  
actuator/valve installation. Packages can be mounted  
on the actuator or at a remote location.

Scotch-yoke actuators. Quarter turn,  
pneumatic operation. Available with  
either symmetric or canted scotch yoke  
mechanism for economy of sizing.  
Single and double acting versions  
available. Emergency manual  
handwheel or hydraulic override  
available on request.

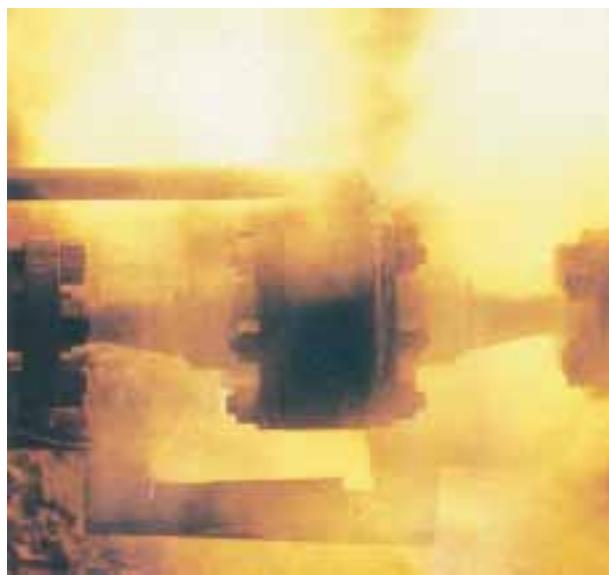

# Fire safe testing

The use of ball valves in the petrochemical industry arose the problem of safeness of these valves in critical conditions, as can be those of fire in the plant.

Tests show that after hours in a fire, plastic parts (seat and o-rings) deteriorate, resulting in metal to metal contact between the seat and the ball, and limiting the possibility of a large leakage.

At the rear side of the seat holders, where the o-rings have also been deteriorated, there is a graphite gasket that prevents a leakage through this way. With the addition of sealant, the valve can be made drop-tight again.

**V&W fire safe ball valves have been successfully tested accordind to BS 6755, API 607, and API 6FA Fire test procedures.**

# Machining division

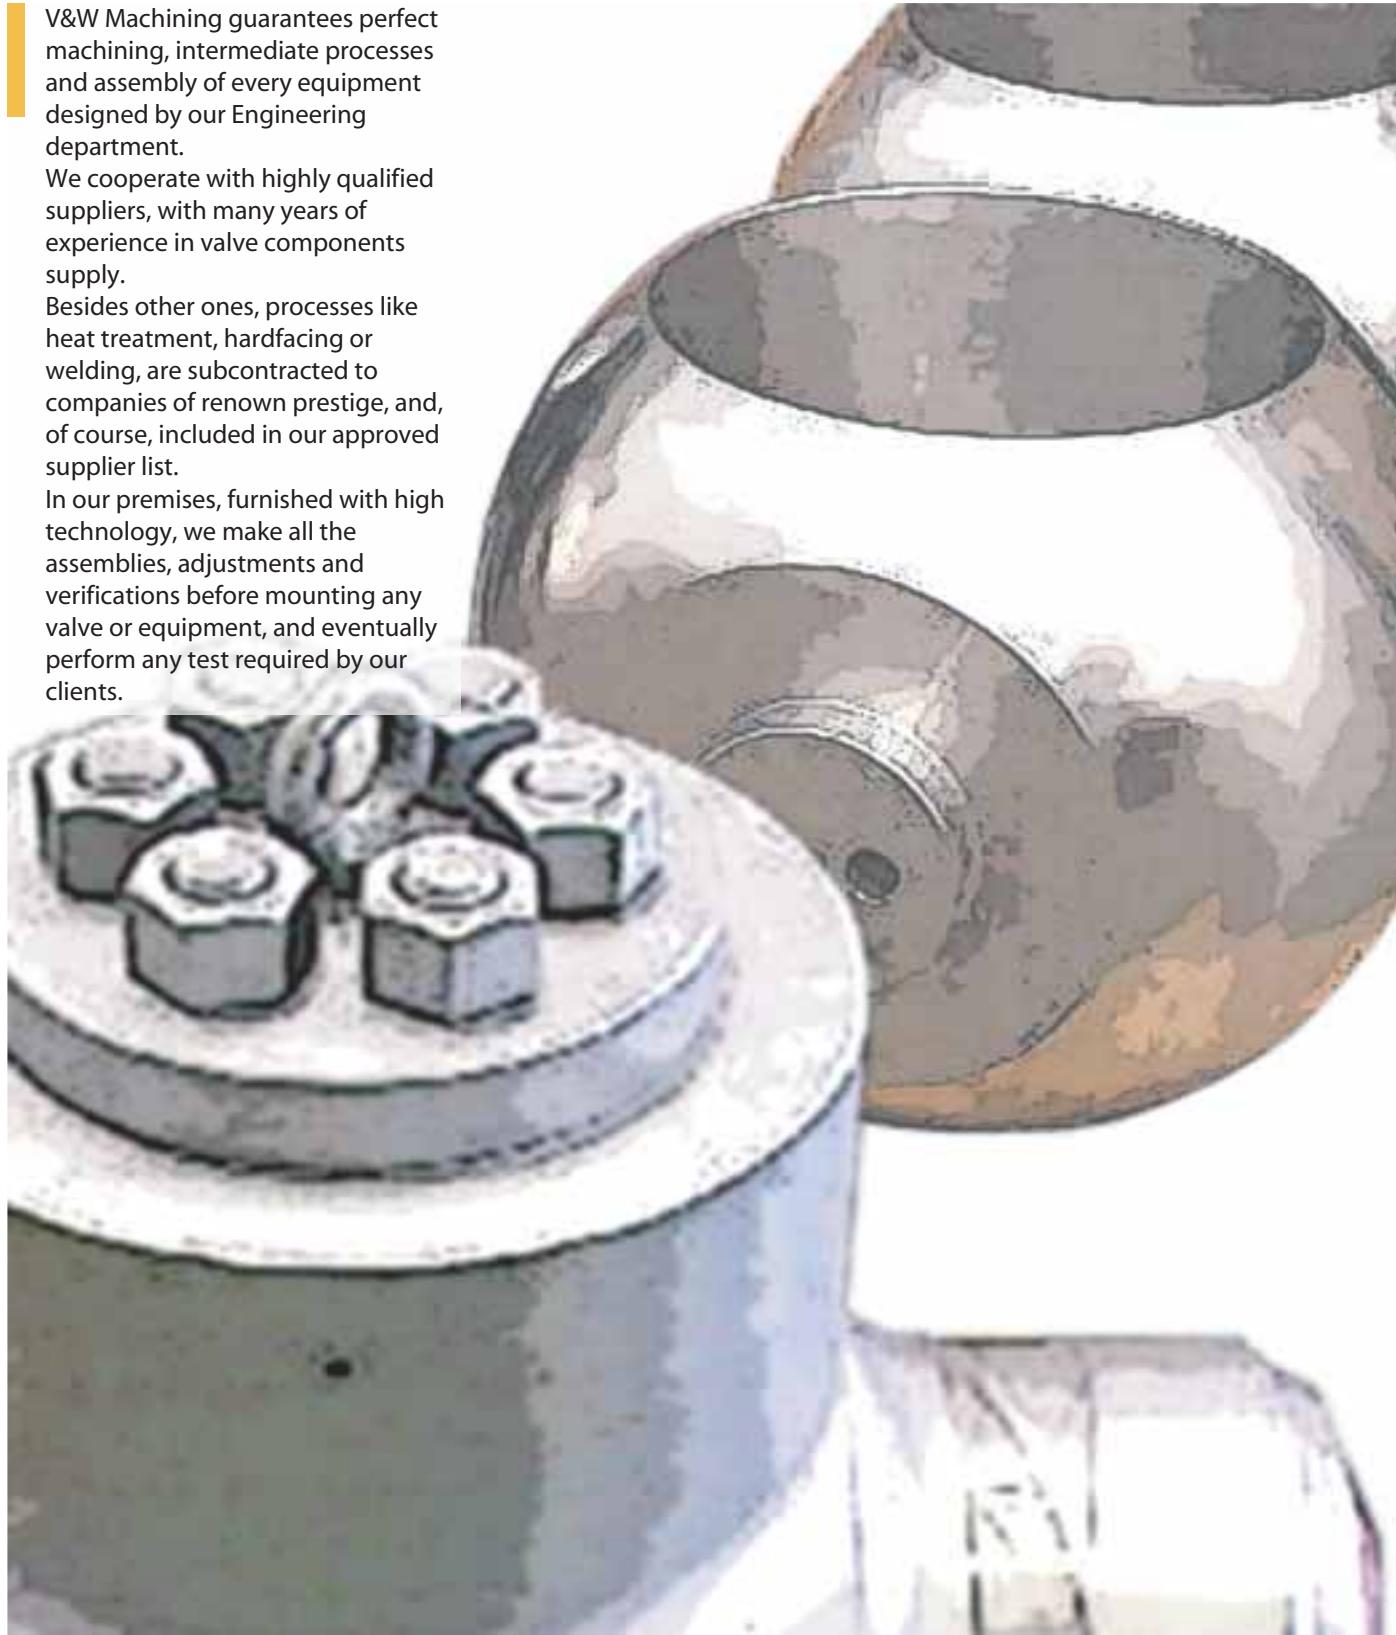

www.vweng.com

V&W Machining guarantees perfect machining, intermediate processes and assembly of every equipment designed by our Engineering department.

We cooperate with highly qualified suppliers, with many years of experience in valve components supply.

Besides other ones, processes like heat treatment, hardfacing or welding, are subcontracted to companies of renown prestige, and, of course, included in our approved supplier list.

In our premises, furnished with high technology, we make all the assemblies, adjustments and verifications before mounting any valve or equipment, and eventually perform any test required by our clients.

Each Vector & Wellheads Engineering product is manufactured in strict accordance to our Quality Assurance Manual requirements, which covers all the production stages, including design, purchasing, manufacturing, welding, testing, etc.

Our excellent Quality Assurance Program has enabled us to obtain an **UNE-EN-ISO 9001 Certificate**.

Every aspect of our activity is based on operating within strictly defined procedures, including: ultrasonic, x-ray, magnetic particle inspection, welding, photoelasticity, and fire safe test.
