YARMOUTH RESEARCH AND TECHNOLOGY

WALWORTH COMPANY

The WALWORTH Company is one of the world's most dominant and comprehensive industrial valve manufacturers. Founded in 1842 by James Walworth, the Company has consistently dedicated itself to the design and manufacture of an array of valves exceptionally suited for the world's fluid control sector. We satisfy all end use industries and comprehensive customer requirements by adhering to the most demanding quality standards.

WALWORTH relies on its broad experience in supplying valves to the petrochemical, oil & gas, petroleum, power generation, pulp and paper, cryogenic and geothermal industries, among others.

Over the years, the Company has produced more than 40,000 different types of products and serves as a global supplier to varied markets utilizing the expertise of over 500 trained employees.

Our manufacturing system includes utilization of Company-directed raw material warehouses; up-to-date specialized machinery; welding processes such as SMAW, GMAW, SAW, PAW; assembly testing for low pressure, high pressure, at low or high temperature; painting processes; crating and shipment.

With Company-directed facilities and stocks in the United States and Mexico, WALWORTH is capable of providing the world's most comprehensive industrial valve line to the North American, Central American, South American, European and African markets. WALWORTH is proud to meet the ultimate demands of customer satisfaction, especially in quality, cost, effectiveness and services in all parts of the world.

WALWORTH VALUES

MISSION

To satisfy the needs of Customers in terms of quality and service and comply with expectations of employees, suppliers and share holders.

VISION

To maintain our good reputation in terms of service, delivery and quality which has been the main goal during more than 167 years, positioning the **WALWORTH** brand as a reliable Company in the market that continues developing new products according to the needs of the industry in terms of technology, environment and quality.

WALWORTH also offers a complete service that includes technical support and personal attention in order to maintain our Customer confidence.

WALWORTH ENGINEERING CONTROL

WALWORTH products are manufactured following strictly the most recognized international standards all over the world, such as API, ANSI, ASME, ASTM, MSS, NACE, AWWA, BSI, CSA, among others. Our Engineering team is always studying the new updates of these standards to incorporate any changes that may affect the design, regulations or performance of our products, being leaders in the new developments achieved.

Design is made using the most advanced technology and equipment, using finite elements and CAD system programs to ensure the proper assembly and performance of products since the concept, calculation and detailed drawings for manufacturing. WALWORTH is a leader in the development of new products according to valve market current needs.

WALWORTH QUALITY SYSTEM

Throughout the years, WALWORTH has developed its Quality System which is an integral part of our manufacturing policy. Our primary goal is to provide products that meet and exceed market standards. In this sense, WALWORTH is an ISO-9001 Audited and Certified Company that has achieved major certifications worldwide. Our system consists of a rigorous quality control as well as the selection of raw materials from approved vendors. Control over our manufacturing process is vital. Serial numbers allow WALWORTH to monitor and trace fabrication processes along with the materials of components.

Certificate API-6D No. 6D-0097 issued by American Petroleum Institute to apply on Gate valves, Plug valves, Ball valves and Check valves manufactured in accordance with API-6D specification.

Certificate API-6A No. 6A-0234 from American Petroleum Institute to apply on valves at PSI, 1 through 4.

Certificate ISO-9001 No. 038 issued by American Petroleum Institute since April 1999.

Certificate as per PED 97/23/EC Module H to stamp CE products.

Certificate of Reliable Supplier No. 199/07 issued by CFE in accordance with ISO-9001 Quality Assurance System.

Certificate NMX-CC-9001 (Mexican Standards ISO-9001) No. 0552/2007 issued by PEMEX in accordance with ISO-9001 Quality Assurance System.

Besides the Quality System Certifications, WALWORTH has achieved the following specific product certifications:

TA Luft Certificate (Fugitive Emission) Approval ISO-5211 Top Flange, Anti-Static Device.

Certificates of Ultra Low Fugitive Emissions No. 20985-3, 8 & 16 in accordance with ISO-15848-1 "Industrial Valves"-Measurement, Test and Qualification Procedures for Fugitive Emissions "Part 1: Classification System and Qualification Procedures for Type Testing of Valves".

Fire Test Certificate No. 04/04 in accordance with API-6FA and API Standard API-607 for Trunnion Ball Valves in accordance with API-6D.

QUALITY CONTROL EQUIPMENT

In order to assure that **WALWORTH** products comply with quality international standards, in-house equipments are kept for monitoring control, some of this equipment includes:

X-Ray Examination Equipment.- WALWORTH has its own Ir-92 source in-house for the radiographic examination (RT) of castings from 0.100" up to 2 1/2" wall thickness to verify the soundness of the casting raw material.

PMI Equipment.- New generation of Positive Material Identification Equipment gives WALWORTH the capability to perform quick chemical analysis on incoming raw materials and on pieces after assembly to certify that materials used were produced and assembled in accordance with WALWORTH and the Customer's specifications.

Magnetic Particle Test.- In a random basis for standard products or when a Customer request MT Certification, WALWORTH has Magnetic Particle Test Equipment to perform on ferromagnetic materials.

Penetrant Test Examination.- WALWORTH has the personnel and materials to perform PT examination by solvent removable or water washable techniques. The NDT personnel are ASNT Certified.

Test Loop. A complete Laboratory Test loop exists for design validation of WALWORTH products performing the test at maximum design pressure and cycling the valves from 3000 to 5000 cycles. The test expends more than 4 months to be finished.

Pressure Gradient Test Loop.- This test exposes Plug valves to the extremes of both positive and negative pressure gradients to verify that the plug in a balanced plug design will prevent lock-up into the body.

Metrology Laboratory.- WALWORTH developed a calibration and/or verification system in all the equipment used in its facilities to ensure the traceability of measurements to international standards. In this way, WALWORTH gets measurement control of its products to comply with international standards.

Fire Test Facilities.- Facilities to perform fire test in accordance to API requirements. The test exposes the valve to a fire flame at 1400 to 1800 °F (761 to 980 °C) to verify proper seal of the valve.

Low Fugitive Emissions Test.- When a Customer requires low fugitive emissions certification. The Lab has its own LFE Test Equipment capable to measure less than 20 ppm either in both static or Mechanical conditions at ambient temperature or thermal cycle operations.

Ultrasonic Testing Equipment.- Using ultrasonic techniques, we can detect sub surface flaws in materials and evaluate castings and forgings that cannot be radiographed. In addition we utilize these techniques to measure the wall thickness of castings and forgings.

Tensile Test Equipment.- To verify the mechanical properties of materials used for manufacturing, WALWORTH tests samples on a random basis even though we receive MTR's from our suppliers and foundries.

Hardness Test Equipments.- Either lab or shop test, Walworth use hardness tester equipments as Rockwell B, C Brinell or Vickers to check compliance against specifications.

PRESSURE CAST STEEL VALVES BODY MATERIALS

Material suffix	Common designation	Forging specification	Wrought bar specification	Service recommendations (1)	Common trim for this base material
					600 To 2500 #
ASTM A216 Grade WCB	Carbon Steel	A105	A105	Non-corrosive applications including water, oil and gases at temperatures between -20°F (-30°F) and +800°F (+425°C)	HF, 3HF+HF, NUC
ASTM A216 Grade WCC	Carbon Steel	A105N	A105N	Non-corrosive applications including water, oil and gases at temperatures between -20°F (-30°F) and +800°F (+425°C)	HF, 3HF+HF, NUC
ASTM A217 Grade WC6	1 1/4% Chrome; 1/2% Moly Low Alloy Steel	A182 F11	A182 F11 Class 2	Non-corrosive applications including water, oil and gases at temperatures between -20°F (-30°C) and + 1100°F(+593°C).	UT, 3HF, A
ASTM A217 Grade WC9	2 1/4 % Chrome Low Alloy Steel	A182 F22	A182 F11 Class 3	Non-corrosive applications including water, oil and gases at temperatures between -20°F (-30°C) and + 1100°F(+593°C).	UT, 3HF, A
ASTM A217 Grade C5	5% Chrome; 1/2 % Moly, Medium Alloy Steel	A182 F5	A182 F5	Mild corrosive or erosive applications as well as non-corrosive applications at temperatures between- 20°F (-30°C) and + 1200°F (+649°C).	UT, 3HF, A
ASTM A217 Grade C12	9% Chrome; 1% Moly, Medium Alloy Steel	A182 F9	A182 F9	Mild corrosive or erosive applications as well as non-corrosive applications at temperatures between- 20°F (-30°C) and + 1200°F (+649°C).	UT, 3HF, A
ASTM A217 Grade C12-A	9% Chrome; 1% Moly; V-N, Medium Alloy Steel	A182 F91	A182 F91	Mild corrosive or erosive applications as well as non-corrosive applications at temperatures between- 20°F (-30°C) and + 1200°F (+649°C).	HF, 3HF+HF, NUC
ASTM A351 Grade CF8	18% Chrome; 8% Nickel; 0.08 % C Stainless Steel	ASTM A182 F304	ASTM A479 304	Corrosive or extremely high temperature non-corrosive services between -450°F (- 268°C) and + 1200°F (+649°C). Above + 800°F (+ 425°C) specify carbon content of 0.04% or greater.	4HF+HF
ASTM A351 Grade CF8M	18% Chrome; 12% Nickel; 2 % Mo; 0.08 % C Stainless Steel	ASTM A182 F316	ASTM A479 316	Corrosive or either extremely low or high temperature non-corrosive services between -450°F (-268°C) and + 1200°F (+ 649°C). Above +800°F (+ 425°C)specify carbon content of 0.04% or greater.	3HF+HF
ASTM A351 Grade CF8C	18% Chrome; 10% Nickel; Cb; 0.08 % C Stainless Steel	ASTM A182 F347	ASTM A479 347	Primarily for high temperature, corrosive applications between -450°F (-268°C) and + 1200°F (+ 649°C). Above +1000°F (+540°C) specify carbon content of 0.04% or greater. Hydrogen service."	347HF
ASTM A487 Grade CA15	12% Chrome Steel	ASTM A182 F6	ASTM A276 410	Corrosive application at temperatures between -20°F (-30°C) and + 900°F (+482°C).	HF, NUC
ASTM A487 Grade CA6NM	12% Chrome Steel	ASTM A182 F6	ASTM A276 410	Corrosive application at temperatures up to +1300°F (704°C). Boiler feed water 250 °F (115°C), sea water, steam sulfur.	HF, NUC
ASTM A494 Grade M-35-1	67% Ni; 30% Cu, Monel	ASTM B564 N04400	ASTM B164 N04400	Weldable grade. Good resistance to corrosion by all common organic acids and salt water. Also highly resistant to most alkaline solutions to +7W°F (+400°C)	AHF
ASTM A494 Grade CY-40	75% Nickel; 15% Cr; 8% Fe, Inconel 600	ASTM B564 N06600	ASTM B166 N06600	Very good for high temperature service. Good resistance to strongly corrosive media and atmosphere to + 800°F (+425°C). Hot boiler feed water, hot caustics, hot concentrate alk water, elevated temperature oxidizing conditions.	600HF
ASTM A494 Grade CW6MC	60% Nickel; 22% Cr; 9% Mo; 3.5% Cb, Inconel 625	ASTM B564 N06625	ASTM B446 N06625	Very good for high temperature service. Good resistance to strongly corrosive media and atmosphere to + 800°F (+425°C).	625HF
ASTM A494 Grade CU5MCuC	42% Nickel; 21.5% Cr; 3% Mo; 2.3% Cu, Incoloy 825	ASTM B425 N08825	ASTM B425 N08825		23HF
ASTM A995 Grade CD3MN	22% Chrome; 5% Nickel; 3% Mo; N; 0.030% C Duplex Stainless Steel Grade 4A.	ASTM A182 F51	ASTM A479 31803	Concentrate brine, fatty acids, potable water, pulp water, pulp liquors at 220 °F (104 °C), sea water, stem, sulfuric acid (15-30% @ 140-160 °F (60-71 °C), sulfuric acid (35-40 % @ 185 °F (85 °C), plus 5 % organics).	3275HF, 31803HF, 51H

(1) The above list of consuming industries and corrosive materials are useful as examples of typical applications where these materials can be used where they can be used as a guide; however, the responsibility to choice the proper alloy is from the Engineering firm or End User.

PRESSURE CAST STEEL VALVES BODY MATERIALS

WALWORTH CAST STEEL VALVES TRIM ARRANGEMENTS

WALWORTH valves are available in the widest range of standard and special trims available in the Industry. The following table shows the most popular trims used for this product line offered these days by the Company.

Special trims as per Customer requirements are available upon request. Please contact your closest WALWORTH Distributor.

WALWORTH Trim nr.	Api-600 Trim nr.	Seal material Type	Stem and other Trim parts (1)	Wedge/disc seat Surfaces	Body seat Surfaces (2)
HF	5 or 5A	13Cr-0.5Ni-1Mn/Co-Cr-A	SS-410(200-275 HBN)	Stellite 6 (350 HBN min)	Stellite 6 (350 HBN min)
3HF+HF	NOT SPECIFIED	18Cr-12Ni-2.5Mo-2Mn/Co-Cr-A	SS-316	Stellite 6 (350 HBN min)	Stellite 6 (350 HBN min)
4HF+HF	NOT SPECIFIED	19Cr-9.5Ni-2Mn-0.08C/Co-Cr-A	SS-304	Stellite 6 (350 HBN min)	Stellite 6 (350 HBN min)
347HF	NOT SPECIFIED	18.5Cr-11Ni-2Mn-Co/Co-Cr-A	SS-347	Stellite 6 (350 HBN min)	Stellite 6 (350 HBN min)
AHF	11 or 11A	70Ni-30Cu/1/2Co-Cr-A	UN N04400 (Monel 400)	UN N04400 (Monel 400)	Stellite 6 (350 HBN min)
600HF	NOT SPECIFIED	75Ni+Co-15Cr-1Mn-8.0Fe-0.15C-0.5Si	UNS N06600 (Incoloy 600)	Stellite 6 (350 HBN min)	Stellite 6 (350 HBN min)
625HF	NOT SPECIFIED	60Ni-22Cr-9Mo-3.5Cb/Co-Cr-A	UNS N06625 (Incoloy 625)	Stellite 6 (350 HBN min)	Stellite 6 (350 HBN min)
23HF	NOT SPECIFIED	42Ni-21.5Cr-3Mo/Co-Cr-Mo	UNS N08825 (Incoloy 825)	Stellite 21 (320 HBN min)	Stellite 21 (320 HBN min)
NUC	NOT SPECIFIED	13Cr-0.5Ni-1Mn/NUCALLOY	SS-410(200-275 HBN)	NUCALLOY	NUCALLOY
23HF	NOT SPECIFIED	42Ni-21.5Cr-3Mo/Co-Cr-Mo	UNS N08825 (Incoloy 825)	Stellite 21 (320 HBN min)	Stellite 21 (320 HBN min)
32750HF	NOT SPECIFIED	25Cr-7Ni-4Mo-0.28N-0.03C/Co-Cr-A	UNS S32750	Stellite 6 (350 HBN min)	Stellite 6 (350 HBN min)
31803HF	NOT SPECIFIED	22Cr-5.5Ni-3Mo-N-0.03C/Co-Cr-A	UNS S31803	Stellite 6 (350 HBN min)	Stellite 6 (350 HBN min)
51H	NOT SPECIFIED	22Cr-5.5Ni-3Mo-N-0.03C/Co-Cr-A	UNS S31803	Stellite 6 (350 HBN min)	Stellite 6 (350 HBN min)

(1) Stem shall be wrought material.

(2) Back seat fro trims API-600 No. 5 shall have 250 HBN minimum.

COMMON CONSTRUCTION MATERIALS COMBINATION

Following table shows the most common combination in between base material and trim. There are many other trims which can be combined with these base materials; please refer to other sections of this catalog or directly to the Plant for additional information.

No.	Description	Carbon steel	1 1/4 % Chrome	2 1/4 % Chrome	9Cr-1MO-V	316 Stainless steel	347 Stainless steel

Notes:

1. The percentage (%) shown on the elements is the maximum except where ranges are indicated.
2. Steel CF8C should have a Columbium content of not less than 8 times the carbon content, but not exceeding 1%.

PRESSURE SEAL CAST STEEL VALVES

Pressure Seal valves are used primarily, but not limited, to power generation plants with fossil, coal, thermal, gas, nuclear power plants, steam power stations, etc.

Pressure seal valves are excellent in the following conditions: high pressure, high temperature, steam, oxidizing environments, among others.

One of the most important features of WALWORTH Pressure Seal Cast Steel Valves is its ability to use the pressure line to assist in the seal of the valve with a preloaded metallic or graphite pressure seal gasket placed between body and bonnet which reduces weight for easy installation and maintenance increasing safety and seal of the body-bonnet joint.

WALWORTH Pressure Seal Valves are designed in accordance ASME B16.34. Pressure Classes 600, 900, 1500 & 2500 # and sizes from 2" up to 24" nominal diameter.

We offer an array of materials used for this product line, including but not limited to:

1. Carbon Steel WCB, WCC, etc.
2. Low Alloy Steel WC6, WC9, etc.
3. Medium Alloy Steel C12 or nitrogenated C12A, etc.
4. Stainless Steel CF8, CF8M, CF8C, CF10, CG8M, etc.
5. Super Stainless Steel CN7M (Alloy 20), CN3M (Alloy 20 modified), CT15C, etc.
6. High Nickel Alloys Monel M30C, Monel M35-1, Monel CZ100, Inconel CY40 (Inconel 600), CW2M (Hastelloy C4), N12MV (Hastelloy B), CW12MW (Former Hastelloy C-276), CW6M (New Hastelloy C-276), CU5MCuC (Incoloy 825), N7M (Hastelloy B2), CW6MC (Inconel 625), etc.

Design Features

- Design in accordance with ASME B16.34.
- Walworth offer Gate, Globe, Stop Check, Globe "Y" Pattern, Stop Check "Y" Pattern, Swing Check, Tilting Disc Check & Lift Check valves.
- Flexible wedge or Parallel Slide disc options for Gate valve.
- Hand-wheel, Impact Hand-wheel, Chain-wheel, Gear operation, Electric, Pneumatic or Hydraulic Actuation as per Customer requirements.
- Damper and Counterweights for Check valves.
- By-Pass, Lantern rings, grease injectors, connections, etc.
- Extra deep stuffing box available upon Customer request.
- Standard Trim with Stellite 6 on seats and wedge/disc. Non-cobalt base hard facing is also available for nuclear plants applications.
- Test in accordance API-598.

PRODUCT RANGE

Type	Size	Pressure class as per ASME/ANSI B16.34	Ends
Gate	2" to 24"	600, 900, 1500 & 2500 #	RF, RTJ or BW
Globe	2" to 24"	600, 900, 1500 & 2500 #	RF, RTJ or BW
Stop Check	2" to 24"	600, 900, 1500 & 2500 #	RF, RTJ or BW
Globe "Y" Pattern	2" to 24"	600, 900, 1500 & 2500 #	RF, RTJ or BW
Stop Check "Y" Pattern	2" to 24"	600, 900, 1500 & 2500 #	RF, RTJ or BW
Swing Check	2" to 24"	600, 900, 1500 & 2500 #	RF, RTJ or BW
Tilting Disc Check	2" to 24"	600, 900, 1500 & 2500 #	RF, RTJ or BW
Lift Check	2" To 24"	600, 900, 1500 & 2500 #	RF, RTJ or BW

WALWORTH PRESSURE SEAL CAST STEEL GATE VALVES

PRESSURE SEAL GATE VALVES HANDWHEEL OR GEAR OPERATED, RISING STEM; OUT SIDE SCREW & YOKE (OS&Y).

Design Features

- ① Design in accordance with ASME B16.34.
- ② Handwheel design made of ASTM A197 or ASTM A216 grade WCB provides more efficient transfer of loads with minimum weight. Gear operator is also available for easy operation and maximum torque.
- ③ Yoke cap ASTM A515 grade 70 allows easy access to the bearing chamber.
- ④ Thrust bearings for larger sizes minimize torque requirements and facilitate operation due the smooth forces involved.
- ⑤ Body made from carbon steel or alloy steel are manufactured with overlay made from stainless steel in a band inside the body where contact is made in between gasket and body to improve better seal and increase life of sealing area because enhance corrosion resistance. Strong construction of body provides maximum life service and flow efficiency. Options for body material are given in other sections of this catalog. Special materials can be supplied upon request.
- ⑥ Yoke designed with two windows for easy disassembly and/or access to the packing chamber or bonnet retainer when maintenance is required.
- ⑦ Yoke sleeve design permit yoke removal while the valve still in service. Due the material of manufacturing ASTM A439 D2 or B148 95600 reduce friction coefficient reducing torque operation, minimize the wear and eliminate galling.
- ⑧ Stem packing system of two sacrificial packings on top and bottom of the chamber made from braided graphite; remaining rings are made from flexible graphite anti extrusion rings for low fugitive emmissions control. Optional live load packing system with extra deep stuffing box and Belleville washers is available upon request.
- ⑨ Eye Bolt Clamp design allows easy access to the packing chamber and keeps fixed loads on the stem packing regardless of bonnet position.
- ⑩ Bonnet retainer is used to help by tightening the retainer bolt/nuts to seal bonnet-bonnet gasket against body inlay.
- ⑪ Pressure seal gasket made from soft carbon steel (silver plated) or stainless steel for corrosion resistance and avoid galling. The angular relationship in between pressure seal gasket and body utilize forces generated by pressure line to increase gasket sealing effect and long life service. Graphite gasket is available upon request.
- ⑫ Bonnet encapsulated inside the upper side of the body is designed with precision machined sealing surfaces to fit against pressure seal gasket surface to utilize forces coming from line pressure to seal the complete set body-bonnet-gasket. Bonnet retains the packing system and incorporate also integral back seat.
- ⑬ Segmented thrust ring made from hardened steel absorb all internal forces coming from the internal pressure and hold the complete set bonnet-gasket-spacer ring.
- ⑭ Spacer ring prevent deformation when pressures push the complete set bonnet-gasket against segmented thrust ring.

- ⑮ Stem with ACME thread is polished to improve low fugitive emmissions control and easy operation during opening and closing.
- ⑯ Back seat is provided with differential angle with bonnet back seat for packing change even in service (not shown).
- ⑰ Seat rings with stellite 6 overlay for better sealing service provide wear, abrasion and erosion resistance. Seat rings are welded to the body to provide tight joint.
- ⑱ Body guided to minimize thrust loads due flow conditions and guide wedge / parallel slide disc during opening and close. Also helps to avoid damage of the wedge because does not permit sealing areas stroke against seats.
- ⑲ Flexible wedge designed to avoid entrapping due temperature changes and pipe line stress. Sealing areas of the wedge with stellite 6 overlay for better operation service. Other sealing surfaces materials can be provided upon request. Parallel slide disc is an option for specific services as per Customer request.
- ⑳ Test in accordance with API-598.

WALWORTH PRESSURE SEAL GATE VALVES

Following table shows the most common bill of materials for a pressure seal gate valve. There are many other combinations of base material and trim, please refer to other sections of this catalog for additional information or contact to the Plant for more options.

Regular Bill of Materials

No.	Description	Carbon steel
1	Body	ASTM A216 GR. WCB
2	Body inlay	SS-309 (not shown)
3	Thrust ring	AISI 4140
4	Spacer ring	AISI 4140
5	Bonnet retainer	ASTM A515 GR. 70
6	Seat rings	ASTM A515 GR. 70 & Co-Cr-W overlay
7	Bonnet	ASTM A216 GR. WCB or ASTM A105
8	Bonnet Back seat	Integral (not shown)
9	Gasket	Mild steel (100 HB) silver plated
10	Packing	Flexible graphite intermediate rings / anti extrusion rings on top and bottom side of the packing chamber.
11	Gland Bushing	ASTM A276 GR. 410
12	Gland Flange	ASTM A216 GR. WCB
13	Wedge	ASTM A216 GR.WCB & Co-Cr-W OVERLAY
14	Yoke	ASTM A216 GR. WCB
15	Stem	ASTM A182 GR. F6A CL2
16	Stem nut	ASTM B148 C95600
17	Gland flange studs	ASTM A193 GR. B7
18	Gland flange nuts	ASTM A194 GR. 2H
19	Bonnet studs	ASTM A193 GR. B7
20	Stud nuts	ASTM A194 GR. 2H
21	Bearings	Commercial
22	Bearing cover	ASTM A-515 GR. 70
23	Bearing cover studs	ASTM A193 GR. B7
24	Bearing cover stud nuts	ASTM A194 GR. 2H
25	Yoke bolt	ASTM A193 GR. B7
26	Yoke bolt nuts	ASTM A194 GR. 2H
26	Handwheel or gear operator	Commercial
27	Handwheel nut	ASTM A515 GR. 70

WALWORTH PRESSURE SEAL GATE VALVES CLASS 600 **(HANDWHEEL OPERATED)**

Design Features

- Design in accordance with ASME B16.34
- WE short pattern; RF & RTJ long pattern as per ASME B16.10
- Outside Screw & Yoke (OS&Y)
- Flexible wedge
- Option with Parallel Slide disc available upon request
- From 2" to 16" handwheel operated
- End to end dimensions as per ASME B16.10
- Flange dimensions as per ASME B16.5
- Weld end dimensions as per ASME B16.25

WALWORTH PRESSURE SEAL GATE VALVES CLASS 2500 **(GEAR OPERATED)**

Design Features

- Design in accordance with ASME B16.34.
- WE short pattern; RF & RTJ long pattern as per ASME B16.10.
- Outside Screw & Yoke (OS&Y).
- Flexible wedge.
- Option with Parallel Slide disc available upon request.
- From 2" and up Gear operated.
- End to end dimensions as per ASME B16.10.
- Flange dimensions as per ASME B16.5.
- Weld end dimensions as per ASME B16.25.

WALWORTH PRESSURE SEAL CAST STEEL GLOBE VALVES

PRESSURE SEAL GLOBE VALVES HANDWHEEL or GEAR OPERATED, RISING STEM; OUT SIDE SCREW & YOKE (OS&Y)

DESIGN FEATURES

- ① Design in accordance with ASME B16.34.
- ② Handwheel design made of ASTM A197 or ASTM A216 grade WCB provides more efficient transfer of loads with minimum weight. Impactor handwheel provides closing force for positive sealing against disc or back seat. Gear operator is also available for easy operation and maximum torque.
- ③ Thrust bearings for larger sizes minimize torque requirements and facilitate operation due the smooth forces involved.
- ④ Stem guide collar is designed with strong construction to prevent stem rotation; also is suitable for position indicator as per Customer request.
- ⑤ Yoke designed with two windows for easy disassembly and access to the packing chamber or bonnet retainer when maintenance is required.
- ⑥ Yoke sleeve design permit removal from from the yoke while the valve still in service. Due the material of manufacturing ASTM A439 D2 or B148 95600 reduce coefficient of friction reducing torque operation, minimize wear and eliminate galling.
- ⑦ Stem packing system of two sacrificial packings on top and bottom of the chamber made from braided graphite; remaining rings are made from flexible graphite anti extrusion rings for low fugitive emmissions control. Optional live load packing system with extra deep stuffing box and Belleville washers is available upon request.
- ⑧ Eye Bolt Clamp design allows easy access to the packing chamber and keeps fixed loads on the stem packing regardless of bonnet position.
- ⑨ Bonnet retainer is used to help by tightening the retainer bolt/nuts to seal bonnet-bonnet gasket against body inlay.
- ⑩ Pressure seal gasket made from soft carbon steel (silver plated) or stainless steel for corrosion resistance and avoid galling. The angular relationship in between pressure seal gasket and body utilize forces generated by pressure line to increase gasket sealing effect and long life service. Graphite gasket is available upon request.
- ⑪ Bonnet encapsulated inside the upper side of the body is designed with precision machined sealing surfaces to fit against pressure seal gasket surface to utilize forces coming from line pressure to seal the complete set body-bonnet-gasket. Bonnet retains the packing system and incorporate also integral back seat system.
- ⑫ Segmented thrust ring made from hardened steel absorb all internal forces coming from the internal pressure and hold the complete set bonnet-gasket-spacer ring.
- ⑬ Spacer ring prevent deformation when pressures push the complete set bonnet-gasket against segmented thrust ring.
- ⑭ Body made from carbon steel or alloy steel are manufactured with overlay made from stainless steel in a band inside the body where contact is made in between gasket and body to improve a better seal and increase life of sealing area due provided corrosion resistance.
- ⑮ Body guide ribs hardfaced on some sizes of globe, stop check and angle globe patterns provide body guiding for disc or piston assemblies.
- ⑯ Stem with ACME thread is polished to improve low fugitive

emmissions control and easy operation during opening and closing. Back seat is provided with differential angle with bonnet back seat for packing change even in service.

- ⑰ Seat ring with stellite 6 overlay for better sealing service provide wear, abrasion and erosion resistance. Seat ring is welded to the body to provide tight joint.
- ⑱ Body guided plug disc designed to avoid vibration, bending of the stem and/or misalignment during opening, closing or throttle service. Sealing areas of the disc with stellite 6 overlay for better operation service. Other sealing surfaces materials can be provided upon request.
- ⑲ Test in accordance with API-598.

Notes

1. WALWORTH offers two options: Globe Valve and Stop Check Valve.
2. Globe valve works basically as a tight sealing valve offering also service throttle service.
3. Stop Check Valve works same as a Globe Valve but also offer protection in case of back flow due lost of pressure.

WALWORTH PRESSURE SEAL GLOBE VALVES

Following table shows the most common bill of materials for a pressure seal globe valve. There are many other combinations of base material and trim, please refer to other sections of this catalog for additional information.

Regular Bill of Materials

No.	Description	1 1/4 % Chrome
1	"T" pattern body	ASTM A217 GR. WC6
2	Body inlay	SS-309
3	Segmental thrust ring	AISI 410
4	Spacer ring	AISI 410
5	Bonnet retainer	ASTM A-515 GR. 70
6	Seat ring	ASTM A-217 GR. WC6 & Co-Cr-W overlay
7	Bonnet	ASTM A-217 GR. WC6 or ASTM A182 GR. F11
8	Bonnet back seat	Integral (not shown)
9	Gasket	Mild steel (100 HB) silver plated
10	Packing	Flexible graphite intermediate rings / anti extrusion rings on top and bottom side of the packing chamber.
11	Gland bushing	ASTM A-276 GR. 410
12	Gland flange	ASTM A-216 GR. WCB
13	Guided plug	ASTM A-217 GR. WC6 or ASTM A182 GR. F11 & Co-Cr-W overlay
14	Disc nut	ASTM A 276-410
15	Yoke	ASTM A-216 GR. WCB
16	Stem	ASTM A-182 GR. F6A CL2
17	Stem guide	ASTM A-515 GR. 70
18	Stem nut	ASTM B-148 C95600
19	Gland flange stud	ASTM A-193 GR. B7
20	Gland flange nut	ASTM A-194 GR. 2H
21	Bonnet studs	ASTM A-193 GR. B16 (not shown)
22	Stud nuts	ASTM A-194 GR. 7 (not shown)
23	Bearings	Commercial
24	Bearing cover	ASTM A-515 GR. 70
25	Bearing cover stud	ASTM A-193 GR. B7
26	Bearing cover stud nut	ASTM A-194 GR. 2H (not shown)
27	Yoke bolt	ASTM A-193 GR. B7
28	Yoke nuts	ASTM A-194 GR. 2H
29	Handwheel	Commercial
30	Handwheel nut	ASTM A-515 GR. 70

WALWORTH PRESSURE SEAL GLOBE VALVES CLASS 600 **(HANDWHEEL OPERATED)**

Design Features

- Design in accordance with ASME B16.34.
- WE short pattern; RF & RTJ long pattern as per ASME B16.10.
- Rising Stem.
- Guided plug type disc.
- From 2" to 3" handwheel operated.
- From 4" to 10" Impactor handwheel operated.
- End to end dimensions as per ASME B16.10.
- Flange dimensions as per ASME B16.5.
- Weld end dimensions as per ASME B16.25.

WALWORTH PRESSURE SEAL GLOBE VALVES “Y” PATTERN

PRESSURE SEAL GLOBE VALVES “Y” PATTERN HANDWHEEL or GEAR OPERATED, RISING STEM; OUTSIDE SCREW & YOKE (OS&Y).

1. Walworth offer two options; Globe Valve and Stop Check Valve.
2. Globe valve works basically as a tight sealing valve offering also service throttle service.
3. Stop Check Valve works same as a Globe Valve but also offer protection in case of back flow due lost of pressure.

DESIGN FEATURES

- ① Design in accordance with ASME B16.34. “Y” Pattern design increase Cv.
- ② Handwheel design made of ASTM A197 or ASTM A216 grade WCB provides more efficient transfer of loads with minimum weight. Impactor handwheel provides closing force for positive sealing against disc or back seat. Gear operator is also available for easy operation and maximum torque.
- ③ Thrust bearings for larger sizes minimize torque requirements and facilitate operation due the smooth forces involved.
- ④ Stem guide collar is designed with strong construction to prevent stem rotation; also is suitable for position indicator as per Customer request.
- ⑤ Yoke designed with two windows for easy disassembly and access to the packing chamber or bonnet retainer when maintenance is required.
- ⑥ Yoke sleeve design permit removal from from the yoke while the valve still in service. Due the material of manufacturing ASTM A439 D2 or B148 95600 reduce coefficient of friction reducing torque operation, minimize wear and eliminate galling.
- ⑦ Stem packing system of two sacrificial packings on top and bottom of the chamber made from braided graphite; remaining rings are made from flexible graphite anti extrusion rings for low fugitive emissions control. Optional live load packing system with extra deep stuffing box and Belleville washers is available upon request.
- ⑧ Eye Bolt Clamp design allows easy access to the packing chamber and keeps fixed loads on the stem packing regardless of bonnet position.
- ⑨ Bonnet retainer is used to help by tightening the retainer bolt/nuts to seal bonnet-bonnet gasket against body inlay.
- ⑩ Pressure seal gasket made from soft carbon steel (silver plated) or stainless steel for corrosion resistance and avoid galling. The angular relationship in between pressure seal gasket and body utilize forces generated by pressure line to increase gasket sealing effect and long life service. Graphite gasket is available upon request.
- ⑪ Bonnet encapsulated inside the upper side of the body is designed with precision machined sealing surfaces to fit against pressure seal gasket surface to utilize forces coming from line pressure to seal the complete set body-bonnet-gasket. Bonnet retains the packing system and incorporate also integral back seat system.
- ⑫ Segmented thrust ring made from hardened steel absorb all internal forces coming from the internal pressure and hold the complete set bonnet-gasket-spacer ring.
- ⑬ Spacer ring prevent deformation when pressures push the complete set bonnet-gasket against segmented thrust ring.
- ⑭ Body made from carbon steel or alloy steel are manufactured with overlay made from stainless steel in a band inside the body where contact is made in between gasket and body to improve a better seal and increase life of sealing area due provided corrosion resistance.
- ⑮ Body guide ribs hardfaced on some sizes of globe, stop check and angle globe patterns provide body guiding for disc or piston assemblies (not shown).
- ⑯ Stem with ACME thread is polished to improve low fugitive emissions control and easy operation during opening and closing. Back seat is provided with differential angle with bonnet back seat for packing change even in service.
- ⑰ Seat ring with Stellite 6 overlay for better sealing service provide wear, abrasion and erosion resistance. Seat ring is welded to the body to provide tight joint.
- ⑱ Body guided plug disc designed to avoid vibration, bending of the stem and/or misalignment during opening, closing or throttle service. Sealing areas of the disc with Stellite 6 overlay for better operation service. Other sealing surfaces materials can be provided upon request.
- ⑲ Test in accordance with API-598.

WALWORTH PRESSURE SEAL GLOBE VALVES “Y” PATTERN

Following table shows the most common bill of materials for a pressure seal “Y” Pattern globe valve. There are many other combinations of base material and trim, please refer to other sections of this catalog for additional information.

Regular Bill of Materials

No.	DESCRIPTION	2 1/4 % CHROME
1	"Y" pattern body	ASTM A217 GR. WC9
2	Body inlay	SS-309 8 (not shown)
3	Segmental thrust ring	AISI 410 (not shown)
4	Spacer ring	AISI 410 (not shown)
5	Bonnet retainer	ASTM A-515 GR. 70
6	Seat ring	ASTM A-351 GR. CF8M & Co-Cr-W OVERLAY (not shown)
7	Bonnet	ASTM A-217 GR. WC9 or ASTM A182 GR. F22
8	Bonnet back seat	INTEGRAL (not shown)
9	Gasket	MILD STEEL (100 HB) SILVER PLATED
10	Packing	Flexible graphite intermediate rings / anti extrusion rings on top and bottom side of the packing chamber (not shown)
11	Gland Bushing	ASTM A-276 GR. 410 (not shown)
12	Gland flange	ASTM A-216 GR. WCB
13	Guided plug	ASTM A-217 GR. WC9 or ASTM A182 GR. F22 & Co-Cr-W OVERLAY
14	Disc nut	ASTM A 276-410
15	Yoke	ASTM A-216 GR. WCB
16	Stem	ASTM A-182 GR. F6A CL2
17	Stem guide	ASTM A-515 GR. 70
18	Stem nut	ASTM B-148 C95600
19	Gland Flange stud	ASTM A-193 GR. B7
20	Gland Flange nut	ASTM A-194 GR. 2H
21	Bonnet studs	ASTM A-193 GR. B16 (not shown)
22	Stud nuts	ASTM A-194 GR. 7 (not shown)
23	Bearings	COMMERCIAL
24	Bearing cover	ASTM A-515 GR. 70
25	Bearing cover stud	ASTM A-193 GR. B7
26	Bearing cover stud nut	ASTM A-194 GR. 2H
27	Yoke bolt	ASTM A-193 GR. B7
28	Yoke nut	ASTM A 199 GR. 2H
29	Handwheel	COMMERCIAL
30	Handwheel nut	ASTM A-515 GR. 70 (not shown)

WALWORTH PRESSURE SEAL “Y” GLOBE VALVES CLASS 600 **(HANDWHEEL OPERATED)**

Design Features

- Design in accordance with ASME B16.34
- WE short pattern; RF & RTJ long pattern as per ASME B16.10
- Rising Stem
- Guided plug type disc
- From 2” to 3” handwheel operated
- From 4” to 10” Impactor handwheel operated
- End to end dimensions as per ASME B16.10
- Flange dimensions as per ASME B16.5
- Weld end dimensions as per ASME B16.25

WALWORTH PRESSURE SEAL TILTING DISC CHECK VALVES

Design Features

- ① Design in accordance with ASME B16.34.
- ② Designed to close quickly and quietly. It minimize damage due slamming or noise due vibration caused due high velocity reverse flow before completion of closing. Design also suitable for low pressure drop.
- ③ Cover retainer is used to help by tightening the retainer bolt/nuts to seal bonnet-bonnet gasket against body inlay.
- ④ Pressure seal gasket made from soft carbon steel (silver plated) or stainless steel for corrosion resistance and avoid galling. The angular relationship in between pressure seal gasket and body utilize forces generated by pressure line to increase gasket sealing effect and long life service. Graphite gasket is available upon request.
- ⑤ Bonnet encapsulated inside the upper side of the body is designed with precision machined sealing surfaces to fit against pressure seal gasket surface to utilize forces coming from line pressure to seal the complete set body-bonnet-gasket. Bonnet retains the packing system and incorporate also integral back seat system.
- ⑥ Segmented thrust ring made from hardened steel absorb all internal forces coming from the internal pressure and hold the complete set bonnet-gasket-spacer ring.
- ⑦ Spacer ring prevent deformation when pressures push the complete set bonnet-gasket against segmented thrust ring.
- ⑧ Body made from carbon steel or alloy steel are manufactured with overlay made from stainless steel in a band inside the body where contact is made in between gasket and body to improve a better seal and increase life of sealing area due provided corrosion resistance.
- ⑨ Seat ring with stellite 6 overlay for better sealing service provide wear, abrasion and erosion resistance. Seat ring is welded to the body to provide tight joint.
- ⑩ Sealing areas of the disc with stellite 6 overlay for better operation service. Other sealing surfaces materials can be provided upon request.
- ⑪ Damper and counterweight options also available as per Customer request.
- ⑫ Test in accordance with API-598.

CAUTION: install this valve in a horizontal position only. Contact WALWORTH for other installation orientations.

WALWORTH PRESSURE SEAL TILTING DISC CHECK VALVES

Following table shows the most common bill of materials for a pressure seal Tilting Disc Check valve. There are many other combinations of base material and trim, please refer to other sections of this catalog for additional information.

Regular Bill of Materials

No.	Description	9CR-1MO-V
1	Body	ASTM A217 GR. C12A
2	Body inlay	309 STAINLESS STEEL (not shown)
3	Segmental thrust ring	AISI 410
4	Spacer ring	AISI 410
5	Bonnet retainer	ASTM A-515 GR. 70
6	Seat ring	Co-Cr-W OVERLAY
7	Bonnet	ASTM A-217 GR. C12A or ASTM A182 GR. F91
8	Gasket	WILD STEEL (100 HB) SILVER PLATED
9	Tilting disc	ASTM A-351 GR. CF8M Co-Cr-W overlay
10	Bonnet stud	ASTM A-193 GR. B16
11	Bonnet nut	ASTM A-194 GR. 7
12	Hinge pin	ASTM A276 GR. 410
13	Bushing	AISI 1045
14	Arm support	ASTM A217 GR. C12A
15	Hex screw	AISI 316

WALWORTH PRESSURE SEAL TILTING DISC CHECK VALVES CLASS 600

Design Features

- Design in accordance with ASME B16.34.
- WE short pattern; RF & RTJ long pattern as per ASME B16.10.
- Tilting type disc.
- End to end dimensions as per ASME B16.10.
- Flange dimensions as per ASME B16.5.
- Weld end dimensions as per ASME B16.25.

WALWORTH PRESSURE SEAL SWING CHECK VALVES

Design Features

- ① Design in accordance with ASME B16.34.
- ② Designed to close quickly and quietly.
- ③ Cover retainer is used to help by tightening the retainer bolt/nuts to seal bonnet-bonnet gasket against body inlay.
- ④ Pressure seal gasket made from soft carbon steel (silver plated) or stainless steel for corrosion resistance and avoid galling. The angular relationship in between pressure seal gasket and body utilize forces generated by pressure line to increase gasket sealing effect and long life service. Graphite gasket is available upon request.
- ⑤ Bonnet encapsulated inside the upper side of the body is designed with precision machined sealing surfaces to fit against pressure seal gasket surface to utilize forces coming from line pressure to seal the complete set body-bonnet-gasket. Bonnet retains the packing system and incorporate also integral back seat system.
- ⑥ Segmented thrust ring made from hardened steel absorb all internal forces coming from the internal pressure and hold the complete set bonnet-gasket-spacer ring.
- ⑦ Spacer ring prevent deformation when pressures push the complete set bonnet-gasket against segmented thrust ring.
- ⑧ Body made from carbon steel or alloy steel are manufactured with overlay made from stainless steel in a band inside the body where contact is made in between gasket and body to improve a better seal and increase life of sealing area due provided corrosion resistance.
- ⑨ Seat ring with stellite 6 overlay for better sealing service provide wear, abrasion and erosion resistance. Seat ring is welded to the body to provide tight joint.
- ⑩ Sealing areas of the disc with stellite 6 overlay for better operation service. Other sealing surfaces materials can be provided upon request.
- ⑪ Damper and counterweight options also available as per Customer request.
- ⑫ Test in accordance with API-598.
- ⑬ Caution: install this valve in a horizontal position only. Contact Walworth for other installation orientations.

WALWORTH PRESSURE SEAL SWING CHECK VALVES

WALWORTH PRESSURE SEAL LIFT CHECK VALVES

Design Features

- ① Design in accordance with ASME B16.34.
- ② Designed to close quickly and quietly. It minimize damage due slamming or noise due vibration caused due high velocity reverse flow before completion of closing.
- ③ Cover retainer is used to help by tightening the retainer bolt/nuts to seal bonnet-bonnet gasket against body inlay.
- ④ Pressure seal gasket made from soft carbon steel (silver plated) or stainless steel for corrosion resistance and avoid galling. The angular relationship in between pressure seal gasket and body utilize forces generated by pressure line to increase gasket sealing effect and long life service. Graphite gasket is available upon request.
- ⑤ Bonnet encapsulated inside the upper side of the body is designed with precision machined sealing surfaces to fit against pressure seal gasket surface to utilize forces coming from line pressure to seal the complete set body-bonnet-gasket. Bonnet retains the packing system and incorporate also integral back seat system.
- ⑥ Segmented thrust ring made from hardened steel absorb all internal forces coming from the internal pressure and hold the complete set bonnet-gasket-spacer ring.
- ⑦ Spacer ring prevent deformation when pressures push the complete set bonnet-gasket against segmented thrust ring.
- ⑧ Body made from carbon steel or alloy steel are manufactured with overlay made from stainless steel in a band inside the body where contact is made in between gasket and body to improve a better seal and increase life of sealing area due provided corrosion resistance.
- ⑨ Body guide ribs hardfaced on some sizes of globe, stop check and angle globe patterns provide body guiding for disc or piston assemblies.
- ⑩ Seat ring with stellite 6 overlay for better sealing service provide wear, abrasion and erosion resistance. Seat ring is welded to the body to provide tight joint.
- ⑪ Body guided plug disc designed to avoid vibration and/or misalignment during opening or closing. Sealing areas of the disc with stellite 6 overlay for better operation service. Other sealing surfaces materials can be provided upon request.
- ⑫ Valve can be provided with spring as per Customer request.
- ⑬ Equilizer Pipe as per Customer Request
- ⑭ Damper and counterweight options also available as per Customer request.
- ⑮ Piston Check valve works also to offer protection in case of back flow due lost of pressure.
- ⑯ Valve suitable for horizontal or vertical position (when spring is requested).
- ⑰ Test in accordance with API-598.

WALWORTH PRESSURE SEAL LIFT CHECK VALVES

Following table shows the most common bill of materials for a pressure seal Swing Check valve. There are many other combinations of base material and trim, please refer to other sections of this catalog for additional information.

TECHNICAL INFORMATION

TYPE OF OPERATIONS

The WALWORTH standard cast steel pressure seal product line includes many different valves designed to meet most applications.

Special adaptations can be made to meet specific customer requirements. Valves can be supplied with manual handwheel/gear operation, chain wheel, as well as electric, pneumatic and hydraulic actuators.

This makes it possible for WALWORTH to furnish valves adapted to the customers special needs such as controlled opening/closing and remote installation.

Valves can also be supplied with a bypass, drain or vent connection, stem extension, position indicators, floor stand mounting as well as a lever and weight system for swing check valves.

Gear Operators

A manual gear operator is designed with a bevel gear and pinion ratio sized to transmit the required opening/closing torque with normal operator effort on the handwheel. They can be supplied as waterproof units and/or for underground installation with a square operating nut.

Chain Wheel Operation

Chain Wheels are designed for operating valves installed in remote or inaccessible locations. They can be furnished with roller guides to prevent the chain from jumping off the wheel. Impact type chain wheels are also available to assist in unseating a tightly closed valve

Actuators

Valves can be furnished with either electric, pneumatic or hydraulic actuators. The actuators can be furnished as either waterproof and/or explosion proof. The customer must specify such things as open-close speed, maximum differential pressure, service temperature, type of voltage-phase-frequency, air or gas pressure for pneumatic actuators and flow characteristics for hydraulic actuators to be assured of correct performance.

TECHNICAL INFORMATION

RELIEVE PRESSURE ACCESORIES

Excessive pressure trapped in body center cavity of standard pressure seal gate valves can produce overpressure in this area which make difficult or impossible to open the valve. An equilizer system either internal (equilizer hole or groove) or external (equilizer pipe, relieve valve, drain), may release overpressure to another specific pipe system. In case of globe or check valves, these pressure release fixtures are used also to bypass fluid from the center of the body to another specific area.

In the case of Gate Valves with paralell slide disc or inclusive wedge style (when Customer request a valve to be able to seal simultaneously in both directions), these valves are designed to seal against a differential pressure in between central cavity of the body and pipe in both directions. However, there is a physical phenomena when the valve is in closed position and then heated; pressure entrapped will overpressurize the body cavity. This is dangerous and can result in failure of the valve. ASME B16.34 (p. 2.3.3) and ASME B31.1 (p. 107.1) request that process plant designer have to ensure not exceed the rated pressure-temperature. For this, shall be specified by purchaser an equilizer system (either internal or external) to relieve overpressurized fluid to upstream or a relieve valve which can release overpressure to some other piping system. When an equilizer system or a relieve valve is used, valve becomes from bi-directional to unidirectional design and service.

Equilizer hole.- A hole drilled of 1/8" diameter or a groove 1/8" wide and deep is located in the upstream seat area of the disc wedge or paralell slide disc to equilibize pressure.

Drains or Vents.- WALWORTH valves can be supplied upon request with drains and / or vents. WALWORTH design is made with pipe and forge valve socket welded to the body. However, Customer can request specific design to fit their needs.

TECHNICAL INFORMATION

Equalizer pipe.- An external equalizer pipe can be supplied to connect bonnet cavity to downstream side of the valve.

By-Pass valve.- Single by-pass valves can be connected from center cavity of the body to downstream side of the valve to equalize pressure.

Double By-Pass.- As per Customer requirements, WALWORTH gate valves can be manufactured with double By-Pass to permit deviate pressure from upstream to downstream side or from body cavity to downstream side of the valve.

TECHNICAL INFORMATION

WEDGE / DISC STYLES

SOLID WEDGE.- Standard valves are designed with solid rigid wedge, but when pressure and temperature is involve, the rigidity of the wedge promote leak or bind in closed position.

The WALWORTH standard gate valve is designed with flexible wedge to help set seat rings-wedge to seal easily in closed position absorbing dimensional changes due pressure or temperature operation and avoid stuck wedge.

Flexible wedge is also suitable to avoid stuck wedge due their flexibility.

PARALLEL SLIDE DISC.- For applications where temperature involved may expand the stem and cause disc binding, parallel slide disc is recommended because the design use the fluid upstream to assist sealing downstream side of the valve.

During closing operation, close tolerances and guides design permit disc sliding smoothly against the seat rings to avoid wearing or seal areas damage. Stellite seal overalys on sealing areas are recommended for the majority of applications for pressure seal valves, except nuclear plants or those where Co is prohibited.

One or more Springs located in the center of the disc keep tight sealing in between disc and seat rings as per forces calculated; but also permit auto alignment due vibrations or dimensional changes because temperature or prpressure.

T slot shape helps to align stem at the center of the valve.

PRESSURE-TEMPERATURE RATINGS

CAST STEEL ASTM A 216 GR WCB

°F Temperature °C		Maximum allowable non-shock working pressure in PSIG by class					
		150	300	600	900	1500	2500

Notes:

- At temperatures over 1,000°F, the carbon content must be 0.04% or higher.

(a) For welding ends valves only. Flanged ends ratings terminate at 1000°F (538°C).

DESIGN BASIS

All of WALWORTH's valve designs, when applicable, follow one or more of the following standards:

API Standards American Petroleum Institute:

- **API-598** Valve inspection and testing
- **API-600** Steel Gate Valves flanged butt-welding ends, bolted bonnets

ASME Standards American Society of Mechanical Engineers:

- **ANSI B-16.5** Pipeline flanges and flanged fittings
- **ANSI B-16.10** Valve dimensions: face to face and end to end
- **ANSI B-16.25** Buttwelding ends
- **ANSI B-16.10** Flanged, threaded and welding end valves

MSS Standards Manufacturers Standardization:

- **MSS SP-6** Standard finishes for contact faces of pipeline flanges and connecting end flanges of valves and fittings
- **MSS SP-9** Spot facing for bronze, iron and steel flanges
- **MSS SP-25** Standard marking system for valves, fittings, flanges and unions
- **MSS SP-44** Steel pipeline flanges
- **MSS SP-45** By-pass and drain connections
- **MSS SP-53** Quality standard for steel castings and forgings for valves, flanges and fittings and other piping component - Magnetic Particle Examination method
- **MSS SP-54** Quality standard for steel castings for valves, flanges and fittings and other piping components - radiographic method
- **MSS SP-55** Quality standard for steel castings for valves, flanges and fittings and other piping components - visual method for eval of surface irregularities
- **MSS SP-61** Pressure testing of steel valves
- **MSS SP-91** (R 96) Guidelines for manual operation of valves
- **MSS SP-92** (R 92) MSS Valves User Guide

ASTM Standards Manufacturers Standardization:

- **ASTM A 193** Standard specification for alloy-steel and stainless steel bolting materials for high temperature service
- **ASTM A 194** Standard specification for carbon and alloy-steel nuts for bolts high-pressure and high-temperature service
- **ASTM A 216** Standard specification for steel castings, carbon, suitable for fusion welding, for high-temperature service
- **ASTM A 217** Standard specification for steel castings, martensitic stainless and alloy, for pressure-containing parts, suitable for high-temperature service
- **ASTM A 276** Standard specification for stainless and heat-resisting steel bars and shapes
- **ASTM A 351** Standard specification for castings, austenitic, austenitic-ferritic (duplex), for pressure-containing parts
- **ASTM A 352** Standard specification for steel castings, ferritic and martensitic, for pressure-containing parts, suitable for low temperature service
- **ASTM A 515** Standard specification for pressure vessel plates, carbon steel, for intermediate and higher-temperature service
- **ASTM A 516** Standard specification for pressure vessel plates, carbon steel for moderate and low-temperature service

NACE Standards National Association of Corrosion Engineers:

- **NACE MR0175** Standard material requirements sulfide stress cracking resistant metallic materials for oilfield equipment
- **ANSI/ASME B31.1** Power piping
- **ANSI/ASME B31.1** Fuel Gas piping
- **ANSI/ASME B31.1** Process piping

Boiler and pressure vessel code:

- **Section II** Part A - Ferrous material specifications
- **Section II** Part B - Non ferrous material specifications
- **Section II** Part C - Specifications for welding rods, electrodes and filler metals
- **Section V** Non destructive examination
- **Section VIII** Rules for construction of pressure vessels, divisions 1 and 2
- **Section IX** Welding and brazing qualifications

HOW TO ORDER

Size (inch)	Type of valve & Pressure class	Ends	Trim arrangements	Base material ASTM

WALWORTH valves are designed by a catalog figure number which describe their main characteristics. The valve identification system shown below is intended to assist our Customers in valve below is intended to assist our Customers to specify the valve required and avoid mistakes during manufacturing. Describe in an easy way size, type of valve & pressure class, type of ends, trim arrangement, base material & additional requirements to comply with. WALWORTH gate & globe valves are supplied handwheel operation (gate & globe valve) unless otherwise is specified.

Notes

[illegible]

THE WALWORTH COMPANY GENERAL TERMS AND CONDITIONS

ACCEPTANCE: All quotations are for acceptance within 30 days from date of quotation unless extended in writing. In the event a purchase order is placed after this period of time. The Walworth Company reserves the right to requote base prices of all valves offered. All orders and contracts are subject to credit approval and acceptance by the Walworth Company.

FREIGHT: When prices are F.O.B. point of shipment –no freight allowance, we will attempt to route shipments in the method which will result in the lowest cost unless otherwise instructed. All shipments will be freight charges collect except when stipulated on the purchase order, in which case you will be invoiced for all transportation charges. Delivery of material to a common carrier shall be considered to be delivery to Buyer and shall be at Buyer's risk thereafter. Claims of loss of or damage to material in transit shall be filed by the Buyer directly with the carrier.

PRICES: There will be added to all prices quoted sales, use, occupation or any other excise or similar tax which Seller may be required to pay or collect on or in connection with the sale. Seller shall be established by Federal, State or other government regulation with respect to the product(s) covered by the order which shall be lower than the price(s) specified in the order.

ESCALATION TERMS: Prices shown in this price schedule reflect the costs in effect at the time of publication. These prices will remain firm on all products with a quoted delivery of twenty-six (26) weeks or less. On products which have a scheduled delivery of more than twenty-six (26) weeks, the goods will be invoiced based on the applicable price sheet in effect at the time of shipment. In no event will the invoiced price be less than the price originally quoted.

PURCHASED COMPONENTS: (i.e. motors, gearing, etc.) Prices are quoted on supplier price in effect at time of quotation. Actual invoice Price will be adjusted in accordance with the supplier's escalation policy.

DEFERRED SHIPMENTS: If for any reason the customer desires to delay shipments more than 30 days after manufacturing is complete or to place a hold or stop to the order during the manufacturing cycle, The Walworth Company reserves the right to consider the order cancelled and to invoke cancellation charges per the schedule below.

CANCELLATION: After order acceptance by Walworth, items or completed orders may be cancelled and buyer will be charged for work performed, based on the following schedule:

- Five (5%) percent of prices of stock items.
- Ten (10%) percent of price of stock items ordered in quantities which exceed normal inventory levels.
- Five (5%) percent of prices prior to drawing submittal on made-to-order items.
- 15% after drawing approval, but prior to the start of castings.
- 30% to 50% during casting cycle, depending on the state of completion.
- 55% to 75% during machining and assembly operations, depending on the state of completion.
- 100% after final assembly and test.

REMITTANCES: Remittances must be made to the address indicated on the invoice.

CREDIT TERMS: As quoted. Invoices on balances overdue will be subject to a service charge of 1.5 % per month on such indebtedness.

DELIVERIES: Shipments and deliveries shall at all times be subject to the approval of Seller's Credit Department. If the Buyer shall fail to make any payments according to the terms of the contract, Seller may, in addition to and not in limitation of its other rights and remedies, at its option, cancel all or any part of Buyer's incomplete contracts with Seller or may defer shipments of deliveries under Buyer's contracts with Seller except upon receipt of satisfactory security or for cash shipment.

All schedule of shipments are estimated as closely as possible and Seller will use its best efforts to ship within the time scheduled, but does not guarantee to do so. Schedules commence with the date Seller receives authorization to proceed with order, subject to the provisions of the next sentence. The order will not be released for manufacture until complete specifications and approved drawings (if drawing approval is required) are received at the plant of manufacture and the estimated schedule of shipment will commence with the date of such receipt.

Seller shall not be liable for any direct, indirect or consequential damage or loss caused by any delay in delivery, regardless of the cause of delay.

Without limiting the generality of the foregoing, Seller assumes no responsibility for delays in delivery resulting from fire, flood, accidents, riots, strikes, transportation delays, labor or material shortages, existing or future laws, acts of any governmental authority, or any other cause beyond Seller's control. Items offered from stock are subject to prior sale.

INSPECTION: Final inspection and acceptance of products must be made at the plant of manufacture, unless otherwise provided in the order and/ or in agreed upon specifications. Prices do not include charges for special tests or inspections performed at the request of the Buyer, unless called for in the order and/or in agreed upon specifications.

RETURNS: Permission in writing and return tagging instructions must be obtained from Seller before any goods returned for credit or adjustment will be acceptance. Where returned goods are accepted, a minimum charge of 25% of the invoice price will be made, plus freight from both directions and costs of reconditioning the material for resale as new.

WARRANTY: Seller will replace without charge or refund the purchase price of products manufactured by Seller which prove to be defective in the material or workmanship, provided in each case that the product is properly installed and is used in the service for which Seller recommends it and that written claim, specifying the alleged defect, is presented to Seller shall in no event be responsible for (a) claims for labor, expenses or other damages occasioned by defective products or (b) for consequences or secondary damages. THE WARRANTY STATED IN THIS PARAGRAPH IS IN LIEU OF ALL OTHER WARRANTIES, EITHER EXPRESSED OR IMPLIED. WITH RESPECT TO WARRANTIES THIS PARAGRAPH STATES BUYER'S EXCLUSIVE REMEDY AND SELLER'S EXCLUSIVE LIABILITY.

DESIGN, ETC: Seller reserves the right to change design, materials or specifications without notice. There will be a charge for modifying an order after it has been entered when such change or modification results in additional engineering or clerical work for either The Walworth Company or our suppliers.

MINIMUM CHARGE: Orders totaling less than \$100.00 net will be billed at a minimum charge of \$100.00. Repair parts will be billed at a minimum charge of \$50.00.

NOTE: We reserve the right to correct obvious clerical errors in quotations, invoices, and other contracts.
