YARMOUTH RESEARCH AND TECHNOLOGY

WALWORTH

WALWORTH is one of the world's most comprehensive industrial valve manufacturers. Founded in 19th century by James Walworth, the Company has consistently dedicated itself to improvements in design and manufacturing of an array of valves exceptionally suited for the world's fluid control sector. We satisfy all end use industries and comprehensive customer requirements by adhering to the most demanding quality standards.

WALWORTH relies on its broad experience in supplying valves to the petrochemical, oil & gas, petroleum, power generation, pulp and paper, cryogenic and geothermal industries, among others.

Over the years, Walworth has produced over 40,000 different types of products and serves as a global supplier to various markets utilizing the expertise of over 500 trained employees.

Our manufacturing system includes: utilization of Company directed raw material warehouses; modern and newly acquired specialized machinery; welding processes such as SMAW, GMAW, SAW, PAW; assembly testing for all low pressure, high pressure, and at low or high temperatures; painting and coating processes; export crating and shipment.

WALWORTH is capable of providing the world's most comprehensive industrial valve line to the North American, Central American, South American, European and African markets. WALWORTH is proud to meet and satisfy the precise demands of our customers throughout the world by providing a quality product, competitive cost, and excellent service.

WALWORTH VALUES

MISSION

WALWORTH manufactures and supplies world-class valves and components for the flow control industry through exceptional service, competitive pricing, and consistently, on-time deliveries.

VISION

To be the world leader of unparalleled valve manufacturing and supply, WALWORTH:

- Set the standard for product quality in the flow control industry.
- Exceed the service expectations of our customers.
- Forge enduring relationships with customers, team members, and community.
- Hire, develop, and retain experienced and dedicated team members.

WALWORTH ENGINEERING CONTROL

WALWORTH products are manufactured following the strict international standards recognized all over the world, such as API, ANSI, ASME, ASTM, MSS, NACE, AWWA, BSI, CSA, among others. Our Engineering team consistently monitors updates to these standards and incorporates any applicable changes that affect the design, regulations and/or performance of our products.

Our designs are made using the most advanced technology and equipment, finite elements, and CAD system programs to ensure proper assembly and performance. From conception to calculation to detailed drawings for manufacturers, WALWORTH is a leader in development of new products that meet the needs of the current valve market."

WALWORTH QUALITY SYSTEM

Throughout the years, WALWORTH has developed its Quality System which is an integral part of our manufacturing policy. Our primary goal is to provide products that meet and exceed market standards. In this sense, WALWORTH is an ISO-9001 Audited and Certified Company that has achieved major certifications worldwide. Our system includes the selection of raw materials from approved vendors, and rigorous oversight of our manufacturing process that is vital to quality control. The use of serial numbers allows WALWORTH the ability to not only ensure the quality of components used but to monitor and trace the fabrication process as well.

Certificate API-6D No. 6D-0097 issued by American Petroleum Institute to apply on Gate valves, Plug valves, Ball valves and Check valves manufactured in accordance with API-6D specification.

Certificate API-6A No. 6A-0234 from American Petroleum Institute to apply on valves at PSI, 1 through 4.

• Certificate ISO-9001 No. 0038 issued by American Petroleum Institute since April 1999.

• Certificate as per PED 97/23/EC Module H to stamp CE products.

• Certificate of Reliable Supplier No. 082/11 issued by CFE in accordance with ISO-9001 Quality Assurance System.

 Certificate NMX-CC-9001 (Mexican Standards ISO-9001) No. 0552/2007 issued by PEMEX in accordance with ISO-9001 Quality Assurance System.

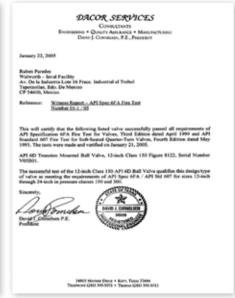

In addition to the Quality System Certifications, WALWORTH has achieved the following specific product certifications:

· TA Luft Certificate (Fugitive Emission) Approval ISO-5211 Top Flange, Anti-Static Device.

· Certificates of Ultra Low Fugitive Emissions No. 20985-3, 8 & 16 in accordance with ISO-15848-"Industrial Valves"-Measurement, Test and Qualification Procedures for Fugitive Emissions" "Part 1: Classification System and Qualification Procedures for Type Testing of Valves".

· Fire Test Certificate No. 04/04 in accordance with API-6FA and API Standard API-607 for Trunnion Ball Valves in accordance with API-6D.

Emissions after 500 cycles at ambient and 350 °F issued by Yarmouth Research and Technology Lab for 3 inch Class 300 Gate Valve After 500 cycles the measurement result was less than 50 ppm.

Emissions after 500 cycles at ambient and 350 °F issued by Yarmouth Research and Technology Lab for 8 inch Class 300 Gate Valve After 500 cycles the measurement result was less than 50 ppm.

Emissions after 500 cycles at ambient and 350 °F issued by Yarmouth Research and Technology Lab for 16 inch Class 150 Gate Valve After 500 cycles the measurement result was less than 50 ppm.

Certificate API-594 No. 594-0007 issued by American Petroleum Institute to apply on Check Valves-Type A; Check Valves Type B manufactured in accordance with API-594 specification.

API-600 Certificate No. 600-0109 issued by American Petroleum Institute to apply on Bolted Bonnet Steel Gate Valves manufactured in accordance with API-600 specification.

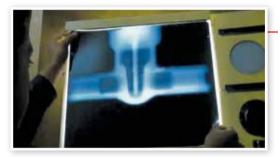

API-602 Certificate No. 602-0024 issued by American Petroleum Institute to apply on Compact Steel Gate Valves, Compact Steel Globe Valves, and Compact Steel Check Valves manufactured in accordance with API-602 specification.

QUALITY CONTROL EQUIPMENT

In order to assure that WALWORTH products comply with international quality standards, in-house equipment is kept for monitoring control. Some of this equipment includes:

X-Ray Examination Equipment. WALWORTH has its own Ir-92 source in-house for the radiographic examination (RT) of castings from 0.100" up to 2 1/2" wall thickness to verify the soundness of the casting raw material.

PMI Equipment. A new generation of Positive Material Identification Equipment gives WALWORTH the capability to perform quick chemical analysis on incoming raw materials and on pieces after assembly, to certify that materials used were produced and assembled in accordance with WALWORTH's and our Customer's specifications.

Magnetic Particle Test. On a random basis for standard products or when a Customer requests MT Certification, WALWORTH has Magnetic Particle Test Equipment to perform on ferromagnetic materials.

Penetrant Test Examination. WALWORTH has the personnel and materials to perform PT examination by solvent removable or water washable techniques. NDT personnel are ASNT Certified.

Test Loop. A complete Laboratory Test loop exists for design validation of WALWORTH products. The test is performed at maximum design pressure, advances the valves from 3000 to 5000 cycles, and requires more than four months to complete.

Pressure Gradient Test Loop. This test exposes Plug valves to the extremes of both positive and negative pressure gradients to verify that the plug in a balanced plug design will prevent lock-up in the body.

Metrology Laboratory. WALWORTH developed a calibration and/or verification system in all of the equipment used in its facilities. This ensures our ability to trace measurements, control products, and comply with international standards.

Fire Test Facilities. WALWORTH has the facilities to perform fire tests in accordance with API requirements. The test exposes the valve to a fire flame at 1400 to 1800 °F (761 to 980 °C) to verify proper seal of the valve.

Low Fugitive Emissions Test. This test is performed when a Customer requires low fugitive emissions certification. Our Lab has its own LFE test equipment that is capable of measuring less than 20 ppm in both static and mechanical conditions at either ambient temperature or thermal cycle operations.

Ultrasonic Testing Equipment. Using ultrasonic techniques, we can detect sub surface flaws in materials and evaluate castings and forgings that cannot be radiographed. In addition, we utilize these techniques to measure the wall thickness of castings and forgings.

Tensile Test Equipment. We use this equipment to verify the mechanical properties of materials used for manufacturing. WALWORTH tests samples on a random basis even though we receive MTRs from our suppliers and foundries.

Hardness Test Equipments.- In both lab and shop tests, WALWORTH uses hardness tester equipment, such as Rockwell B, C Brinell or Vickers, to ensure compliance with specifications.

WALWORTH LUBRICATED PLUG VALVES

ADVANTAGES

Plug Valves have inherent advantages over the other conventional types of Valves, especially when used in corrosive or erosive service. Some of these advantages are:

1. Sealing surfaces are not exposed

The vital surfaces of the plug are self protecting and self cleaning. When fully open, all machined seating surfaces of the plug are protected from erosion or corrosive materials. When closed, only a small area, which is not needed to effect a positive shut off, is exposed to the line fluid.

2. Self cleaning seating surfaces

The shearing action of the plug valve scrapes off any abrasive ingredient which may touch the plug in a closed position.

3. Smooth Flow

The straightway passage through the plug port affords a smooth unobstructed flow, offering no opportunity for sediment or scale to collect.

4. Bubble tight shutoff

The lubricated plug and sealant system assure positive bubble tight shut off when properly maintained.

5. Ease of operation

Positive quarter turn operation is quick and sure.

6. Plug Adjustment

A WALWORTH lubricated plug valve can be adjusted with the valve in line, helping to extend the service life of the valve.

PATTERNS

WALWORTH plug valves are available in three different patterns to provide the efficiency and flexibility to meet the valve need of most piping systems.

SHORT PATTERN

Provides face to face dimensions that match gate valves.

REGULAR PATTERN

Offers the largest port opening in a trapezoidal configuration - close to a full pipe size.

VENTURI PATTERN

Has a smaller port than the other two patterns. Is lower in cost and flow contours maximize hydraulic efficiency.

WALWORTH LUBRICATED PLUG VALVES

THE WALWORTH COMPENSATOR

The plug valve eliminates taper lock, for years of dependable service with little or no maintenance, even in hostile environments.

"Positive Bias" Balance Plug Design

The COMPENSATOR plug valve design is based on a load compensating, mechanically balanced tapered plug, which cannot bind or lock. Maintenance is virtually eliminated; lower operating torque is achieved, and size and weight are reduced by 20% to 25%. The COMPENSATOR provides these major benefits, while retaining the positives attributes of automatic shut-off, fire safety, and resistance to corrosion and erosion not found in conventional tapered plug valves.

How it works

Unlike other lubricated plug valve designs, WALWORTH's COMPENSATOR plug valve does not rely on sealant or line pressure to keep the plug from wedging or binding in the valve body. Instead, the COMPENSATOR utilizes Inconel long life spring-type helicoidal and an adjusting screw to mechanically balance the plug and compensate for line pressure. The function of the sealant, therefore, is to provide a backup to the tight seal between the plug and body. The sealant chamber is isolated from the line media. A sealant fitting is provided to permit injection of sealant into the isolated chamber to assure a bubble tight seal and to lubricate internal parts.

Positive Downward Bias Pressure Balance

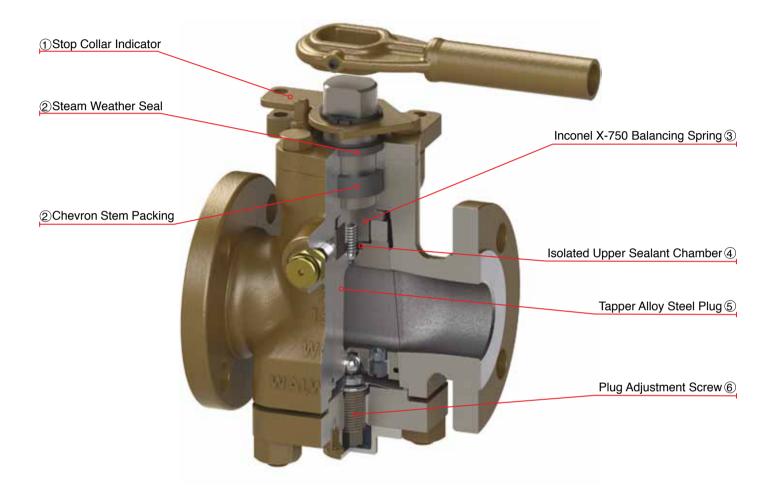

There is a passageway with a ball check between the flow port of the plug and the lower chamber. When a pressure rise occurs in the flow port area, the ball check is held shut, forcing pressure equalization to take place through the annular clearance gap at the top and bottom of the lubricated plug. Since the net differential plug area is greater at the bottom, the result is a net downward force acting on the plug. In the event of a sudden drop in flow port pressure, the positive bias downward is maintained because the upper sealant chamber is forced to equalize through the annular gap, while the lower cavity equalizes through both the gap and the ball check valve. Thus, the lower chamber reaches equilibrium with the flow port well before the upper chamber, causing the plug to stay against the ball at its base.

THE WALWORTH COMPENSATOR PLUG VALVE SHORT PATTERN

Design Features

- (1) Open/Close Indicator quarter turn stop collar also functions as an indicator of the plug's position.
- (2) Stem Sealing System the stem is protected two ways. The weather seal protects it from external attack. High temperature soft packing protects the stem against internal leakage.
- (3) Balancing Spring the mechanical spring type grade X-750 Inconel is under compression and holds the plug in an equalized pressure position, thus eliminating the possibility of plug taper
- (4) Isolated Sealant Chamber the sealant's function is to provide a backup to the positively biased surface between the plug and the body.
- (5) Plug the mechanically balanced plug has a permanently bonded PERFLO coating for a very low coefficient of friction. Operating torque remains low over the 4,000 cycle test life of the valve.
- Plug Adjustment the steel plug is mechanically loaded into the body to put tension on the balance spring and is then adjusted for optimum balance and performance. The adjustment screw is covered to prevent tampering and possible misadjustment.

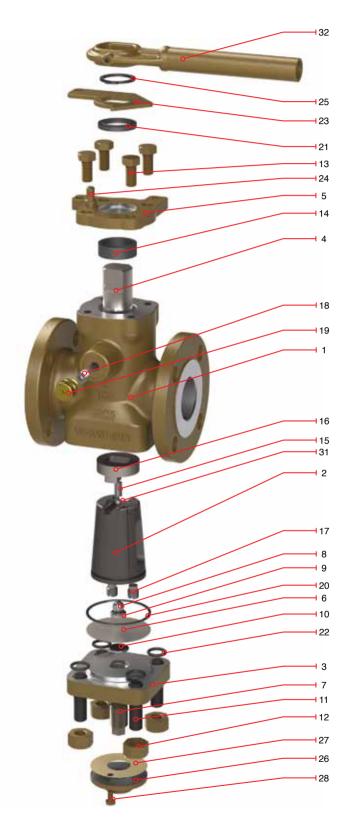

*End to End Dimension as per ASME B16.10 to meet Short Pattern Length

COMPENSATOR PLUG VALVE REGULAR PATTERN

Design Features

- ① Open/Close Indicator quarter turn stop collar also functions as an indicator of the plug's position.
- ② Stem Sealing System the stem is protected two ways. The weather seal protects it from external attack. High temperature soft packing protects the stem against internal leakage.
- ③ Balancing Spring the mechanical spring type grade X-750 Inconel is under compression and holds the plug in an equalized pressure position, thus eliminating the possibility of plug taper lock.
- (4) Isolated Sealant Chamber the sealant's function is to provide a backup to the positively biased surface between the plug and the body.
- (5) Plug the mechanically balanced plug has a permanently bonded PERFLO coating for a very low coefficient of friction. Operating torque remains low over the 4,000 cycle test life of the valve.
- (6) Plug Adjustment the steel plug is mechanically loaded into the body to put tension on the balance spring and is then adjusted for optimum balance and performance. The adjustment screw is covered to prevent tampering and possible misadjustment.

*End to End Dimension as per ASME B16.10 to meet Regular Pattern Length

Design Features

- (1) Stem Sealing System the stem is protected two ways. The weather seal protects it from external attack. High temperature soft packing protects the stem against internal leakage.
- (2) Balancing Spring the mechanical spring type grade X-750 Inconel is under compression and holds the plug in an equalized pressure position, thus eliminating the possibility of plug taper lock.
- (3) Isolated Sealant Chamber the sealant's function is to provide a backup to the positively biased surface between the plug and the body.
- 4 Plug the mechanically balanced plug has a permanently bonded PERFLO coating for a very low coefficient of friction. Operating torque remains low over the 4,000 cycle test life of the valve.
- (5) Plug Adjustment the steel plug is mechanically loaded into the body to put tension on the balance spring and is then adjusted for optimum balance and performance. The adjustment screw is covered to prevent tampering and possible misadjustment.
- * End to End Dimension as per ASME B16.10 to meet Venturi Pattern Length

WALWORTH Top Entry Cast Steel Plug valves provide safe, reliable, long life service at an economical price. The taper of the plug and seat maintains an intimate working contact between the two parts at all times, and with the proper lubricant, the valve seals drop tight from zero to full rated differential pressure.

Design Features

- Sealant Fitting fast sealant injection that can be removed under pressure. The system includes ball check valves that prevent back pressure and maintain pressure in the sealant cavity.
- ② Balancing Spring the mechanical spring type grade X-750 Inconel washer is under compression and holds the plug in an equalized pressure position, thus eliminating the possibility of plug taper lock.
- ③ Sealant Grooves this system permits sealant injection while the valve is under full line pressure. WALWORTH recommends that the valves be lubricated, with the plug in the fully opened or fully closed position for optimum valve performance.
- (4) Open/Close Indicator quarter turn stop collar also functions as an indicator of the plug's position.
- Diaphragm Gasket ensures a complete sealing of the valve against any leakage.
- (6) Plug WALWORTH plugs are designed with a specific coating material that reduces the coefficient of friction friction, making the valve operate with low torque.
- * End to End Dimension as per ASME B16.10 to meet short Pattern Length

SHORT PATTERN

Provides face to face dimensions that match gate valves.

REGULAR PATTERN

Offers the largest port opening in a trapezoidal configuration – close to a full pipe size.

VENTURI PATTERN

Has a smaller port than the other two patterns. Is lower in cost and flow contours maximize hydraulic efficiency.

TOP ENTRY PLUG VALVE REGULAR PATTERN

WALWORTH Top Entry Cast Steel Plug valves provide safe, reliable, and long life service at an economical price. The taper of the plug and seat maintains an intimate working contact between the two parts at all times, and with the proper lubricant, the valve seals drop tight from zero to full rated differential pressure.

Design Features

- (1) Sealant Fitting fast sealant injection that can be removed under pressure. The system includes ball check valves that prevent back pressure and maintain pressure in the sealant cavity.
- 2 Balancing Spring the mechanical spring type grade X-750 Inconel washer is under compression and holds the plug in an equalized pressure position, thus eliminating the possibility of plug taper lock.
- (3) Sealant Grooves this system permits sealant injection while the valve is under full line pressure. WALWORTH recommends that the valves be lubricated with the plug in the fully opened or fully closed position for optimum valve performance.
- (4) Open/Close Indicator quarter turn stop collar also functions as an indicator of the plug's position.
- (5) Diaphragm Gasket ensures a complete sealing of the valve against any leakage.
- (6) Plug WALWORTH plugs are designed with a specific coating material that reduces the coefficient of friction, making the valve operate with low torque.
- * End to End Dimension as per ASME B16.10 to meet Regular Pattern Length

GAS SERVICE PLUG VALVE FIG. 1966

The WALWORTH Gas Service Plug valves were designed specially to give natural gas utility companies high quality carbon steel lubricated plug valves at a price comparable to cast iron gate valves with flanged ends.

The cast carbon steel body and ends have proved to be far superior to conventional cast iron gate valves in cases where gas lines have been subjected to ground shifting.

These WALWORTH plug valves incorporate a high strength cast iron plug. This plug is coated for long trouble-free life and low operating torque. The valves are single gland construction employing two cap screws and packing arrangements.

- (1) Sealant Fitting fast sealant injection that can be removed under pressure. The system includes ball check valves that prevent back pressure and maintain pressure in the sealant cavity.
- (2) Balancing Spring the mechanical spring type grade X-750 Inconel washer is under compression and holds the plug in an equalized pressure position, thus eliminating the possibility of plug taper lock.
- 3 Sealant Grooves this system permits sealant injection while the valve is under full line pressure. Walowrth recommends that the valves be luibricated with the plug in the fully opened or fully closed position for optimum valve performance.
- (4) Open/Close Indicator quarter turn stop collar also functions as an indicator of the plug's position.
- (5) Diaphragm Gasket Ensures a complete sealing of the valve against any leakage.
- Plug Walworth Plugs are designed with a specific coating material that reduces the coefficient of friction, making the valve operate with low torque.

TECHNICAL INFORMATION

WALSEAL PLUG VALVES SEALANT

FUNCTION AND PROPERTIES OF WALSEAL SEALANTS

To assure thoroughly satisfactory service, WALWORTH Walseal Sealants should always be used with WALWORTH Plug Valves.

Function: The sealant minimizes friction during operation of the valve and protects seating surfaces from corrosion. Because the ports of valves are completely encircled with sealant grooves, leakage is prevented by the Walseal sealant.

Properties: Walseal sealants have the necessary properties to serve a variety of purposes.

- Have lubricating value to allow the valve to turn easily.
- Have sufficient body to resist dilution by line fluids and still assure tight sealing.
- Are chemically inert in the fluids for which they are specified. and have the ability to adhere to the metal of the finished seating surfaces to protect from corrosion.
- Remain in a plastic state over a wide range of temperature conditions, to act as a hydraulic medium and provide for lubrication and corrosion protection.
- 5. Contain a minimum of ingredients that might solidify from temperature or chemical reactions and clog the groove system.

SELECTION AND MAINTENANCE OF WALSEAL SEALANT

How to select a sealant:

1. Line Contents - Select a sealant recommended for the particular service requirements.

- 2. Color Where discoloration of the line contents must be quarded against, select a white sealant if available. In special cases consult a WALWORTH representative.
- Contamination Sealant for use with foodstuffs or pharmaceuticals must be non-toxic, taste -and color- free and chemically inert.
- Temperature As a general rule, choose the sealant with the lowest maximum temperature rating. Such a sealant will usually have greater lubricating value at normal temperatures than one with a higher limit. This is important as it affects the ease of operation of the valve.
- 5. Compromise If a sealant is required for a mixed service condition, a good practical rule is to select the sealant recommended for the predominating part of the pipeline contents.
- Nitrating Acids It is dangerous to use certain sealants on nitrating acids. Please contact your WALWORTH representative for this application.

Proper sealant maintenance:

The amount of maintenance required depends upon the frequency of operation of the valve.

Regular maintenance preserve the seating surfaces and prevents leakage. Definite periodic service gives the best results. Any valve not regularly operated should be serviced at least every six months.

Ordering Information:

- 1. State whether jumbo, stick or bulk sealant is desired.
- 2. For bulk sealant, give Walseal number and container size.

| STICK | STICK SIZE | AVAILABLE IN WALSEAL NO. |

TECHNICAL INFORMATION WALSEAL PLUG VALVES SEALANT

WALSEAL #10

Temperature range from -20F to 500F Stick / -40F to 500F Bulk

Color: dark gray

Service: General purpose sealant intended for use in natural gas and liquid petroleum services, including crude distillates combustible fuels such as gasoline, jet fuel and heating oils. Used as assembly sealant in all WALWORTH plug valves unless otherwise specified.

Not intended for use in: solvents (aromatic); strong acids; alkalies or steam.

WALSEAL #20

Temperature range from OF to 650F Bulk / 30F to 690F Stick

Color: red

Service: Service: High temperature general purpose sealant for use in acids, alkalis, alcohols, amines, asphalt, aqueous solutions, fats, glycerine, glycols, soap, steam, or water service having continuous exposure to temperatures above 400F.

Not intended for use in: aromatic solvents; light liquid hydrocarbons; or nitrating acids.

WALSEAL #40

Temperature range from 1 OF to 350F Stick / -10F to 350F Bulk

Color: light brown

Service: Specifically formulated for resistance to all octane gasolines, aviation and jet fuels, kerosene, fuel blending ingredients and water. Approved for government use per MIL-G-6032.

Not intended for use in: strong acids and alkalies.

WALSEAL #50

Temperature range from -50F to 300F

Color: beige

Service: Low temperature general purpose sealant for use in services similar to Walseal #10. Recommended for continuous exposure to temperatures below 0°F.

Not intended for use in: solvents (aromatic and chlorinated); strong acids and alkalies.

WALSEAL #60

Temperature range from 1 OF to 350F Stick / 0F to 300F Bulk Service: Suitable for water, acids, alkalies, alcohols, and amines. May be used in food or pharmaceutical applications if approved by user. Certified by the National Sanitary Foundation.

Not intended for use in: hydrocarbon solvents.

Continued use of any sealant at either the low or high temperature limit is not recommended.

For more information concerning these sealants or recommendations for a particular service, contact your WALWORTH representative.

WALWORTH VALVE FLUSH

For hard-to-operate valves

-20°F to 400°F

(-28°C) (204°C) BLACK

VALVE FLUSH is not a sealant; however, it is compatible with any lubricant or sealant. It contains molybdenum disulfide for added lubricity. VALVE FLUSH may be applied with conventional lubricating equipment.

VALVE FLUSH will work through any fitting that is not completely plugged. In other words, if VALVE FLUSH cannot be injected past the fitting, it will not free the valve. If the fitting is plugged, then it is recommended that the fitting be removed and replaced with the appropriate WALWORTH fitting.

TECHNICAL INFORMATION

ACTUATORS

Valves can be furnished with either electric, pneumatic or hydraulic actuators. The actuators can be furnished as either waterproof and/or explosion proof. The Customer must specify such things as open-close speed, maximum differential pressure. service temperature, type of voltage-phase-frequency, air or gas pressure for pneumatic actuators, and flow characteristics for hydraulic actuators to be assured of correct performance.

LUBRICANT ACCESORIES

1002 WALSEAL HYDRAULIC DELTA STICK SEALANT GUN. FOR USE WITH "K" SIZED SEALANT.

1699 HIGH PRESSURE LUBRICANT GUN

1699 G HIGH PRESSURE LUBRICANT GUN WITH GAUGE

Where a number of valves are installed under the same or related service conditions, it is advantageous to lubricate them with a **WALWORTH High Pressure Lubricant Gun.**

The Walworth High Pressure Lubricant Gun is the only portable gun that can handle full-bodied valve lubricants in stick form.

The gun is self-priming and may be used in any position. The pump handle is detachable and has a hole drilled near one end.

By detaching the handle and placing the hole over the protruding button on the charging cap, the cap can readily be removed and replaced.

The handle is also used as a pusher for returning the piston to the bottom of the cylinder for the purpose of charging the gun.

To charge the gun, the by-pass is opened and the piston pushed down as far as it will go. The by-pass valve is then closed and two

sticks of WALWORTH Jumbo Size Lubricant are inserted. Then the charging cap is replaced, using the pump handle and protruding button on the cap to tighten it, and the gun is ready for use. The lever handle is then pumped until sealant appears at the end of the hose.

During operation of the gun, if the pressure that is created locks the coupling to the button-head filling, the pressure can be relieved and the coupling disconnected by opening the bypass valve. Relief fittings are provided on the hose and within the gun to prevent damage to the valve, should the lubricating system be clogged, or to the gun itself if operated when empty.

HIGH PRESSURE GAUGE

For use with sealant hand guns and pumps. An essential accessory to indicate when sufficient sealant pressure has been developed.

Gauge needle pulsation goes up by steps until the valve is completely filled with Sealant. When Sealant pressure reaches a certain point, the gauge needle begins to drop, showing that the valve is full. Gauge also indicates valve adjustment and other service is required.

TECHNICAL INFORMATION

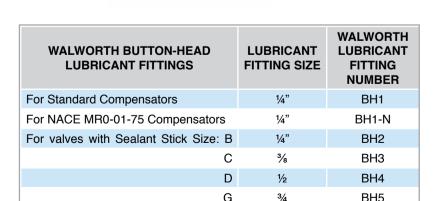

WALWORTH LUBRICANT FITTINGS

Most types of WALWORTH Lubricated Plug Valves are regularly provided with the WALWORTH Lubricant Fitting below illustrated. It is a Giant Button-Head Fitting to which the lubricant gun may be easily coupled for a leakproof connection. These fittings may also be used as regular lubricant screws with standard size lubricant sticks.

One size of Button-Head Fitting is used for all Compensator Plug Valves. The Button-Head figure number for other WALWORTH Plug Valves is the same as the "Sealant Stick Size" listed on the catalog page for each valve type and size.

ANSI STANDARD B16.25

- A Nominal outside diameter of pipe in inches.
- AA- Nominal outside diameter for cast steel valves in inches (see table).
- 8 Nominal inside diameter of pipe in inches. **
- t -Nominal wall thickness of pipe in inches.
- C A-0.031-1.75t-0.010 in inches.

For complete dimensions, details, other configurations, and tolerances, ANSI B16.25

OUTSIDE CONTOUR

When the thickness of the welding end of the valve is greater than that of the mating pipe, and when the additional thickness Increases the outside diameter, a taper weld having a slope not exceeding 1:3 may be employed or the greater outside diameter may be extended back in a manner within the maximum slope lines indicated in Figs. 1A and 1B. The transition shall be of a shape avoiding sharp reentrant angles and abrupt changes in slope. The profile of the outside contour shall be at the manufacturer's option provided above conditions are met.

INSIDE CONTOUR

For a joint without a continuous backing ring, the inside contour of the valve end shall be bored to a diameter B to a depth of 1/2" min. The inside diameter of a valve end beyond this machined surface may be either larger or smaller than the inside diameter of the pipe. The transition shall be of a shape avoiding sharp re-entrant angles and abrupt changes in slope. See Figs. 1A and 1B. (Transition shape also applies to Figs. 2 and 3).

For a joint with a continuous rectangular backing ring, the contour of the valve end shall be a straight bore of diameter C, 1/2 in. deep. This depth is based on a backing ring 3/4 in. wide; but if a wider ring is used, the depth shall be increased to provide the 1/8 in. minimum end clearance indicated. See Fig. 2.

For a joint with a continuous tapered backing ring, the inside contour of the valve end shall be taper bored from diameter C at the lip tapering at 10 deg to a taper length of 7/32 in minimum. Beyond this taper length the bore may be extended to the inside port diameter. See fig. 3

*See Figs. 1A and 1 for Outside Contours.

** Tolerances for B: NPS 10 and Smaller: +0.03': NPS 12 to 18: ± 0.06'; NPS 20 to 24: +0.12, - 0.06"

BORES: WALWORTH's standard practice for Class 150 and 300 cast steel valves is that buttwelding ends be machined in accordance with Figs. 1A and 1B, bored to match the inside diameters of Schedule 40 pipe in sizes 12-inch and smaller, and of 0.375 inch Standard Wall Pipe in larger sizes, unless otherwise specified. Orders for all sizes of Class 600 and higher must specify the diameter of valves bore, type of backing ring, etc.

The regular 1/16-inch raised face of Class 150 and 300 flanges is included in the minimum flange thickness given above, but other raised faces must be added thereto. Class 150 loose flanges are thicker than integral flanges for sizes 3" inch and smaller. Note Column B.

Lengths of stud bolts do not include the height of the points.

Bolt lengths not shown in the tables can be determined by reference to Appendix F of ANSI B16.5-1981.

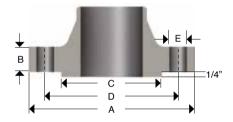

When flanges are integral with valves, the bolt holes which are in multiples of four are drilled to straddle the center line unless otherwise ordered.

The regular 1/4-inch raised face of class 600, 900 and 1500 flanges is not included in the minimum flange thickness given above.

The addition of any facing is beyond the outside edge of the flange.

Lengths of steel stud bolts do not include the height of the points.

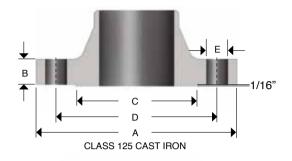

Bolt lengths not shown in the tables can be determined by reference to Appendix F of ANSI B 16.5- 1961.

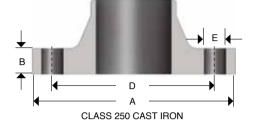

When flanges are integral with valves, the bolt holes, which are in multiples of four, are drilled to straddle the center line unless otherwise ordered.

| 12 | 19 | 1 1/4 | 17 | 1 | 12 | 7/8 | 3 3/4 |

Bolt lengths are for flanges of thickness shown herein. Bolt lengths should be checked for the thicker flanges shown in some individual valve description pages. When flanges are integral with valves or fittings, the bolt holes, which are in multiples of four, are drilled to straddle the center lines unless otherwise ordered. Class 125 cast iron flanges have plain faces.

CLASS 250

| NOMINAL | F | LANGE THICKNES | S | DRIL | LING | BOL | LENGTH OF | |
|--------------|-------------------------|------------------------------|---------------------------------|---------------------------------|--------------------------------|--------------------|----------------------|-----------------------|
| PIPE SIZE | FLANGE DIAMETER A | FLANGE THICKNESS MIN B | DIAMETER OF RAISED FACE C | DIAMETER OF VOLT CIRCLE D | DIAMETER OF BOLT HOLES E | NUMBER OF BOLTS | DIAMETER OF BOLTS | MACHINE BOLTS F |

THE WALWORTH COMPANY GENERAL TERMS AND CONDITIONS

ACCEPTANCE: All quotations are for acceptance within 30 days from date of quotation unless extended in writing. In the event a purchase order is placed after this period of time, the WALWORTH Company reserves the right to requote base prices of all valves offered. All orders and contracts are subject to credit approval and acceptance by the WALWORTH Company.

FREIGHT: When prices are f.o.b. point of shipment - no freight allowance - we will attempt to route shipments in the method which will result in the lowest cost unless otherwise instructed. All shipments will be freight charges collect except when stipulated on the purchase order, in which case you will be invoiced for all transportation charges. Delivery of material to a common carrier shall be considered to be delivery to Buyer and shall be at Buyer's risk thereafter. Claims of loss of or damage to material in transit shall be filed by the Buyer directly with the carrier.

PRICES: There will be added to all prices quoted sales, use, occupation or any other excise or similar tax which Seller may be required to pay or collect on or in connection with the sale. Seller shall be established by Federal, State or other government regulation with respect to the product(s) topped by the order which shall be lower than the price(s) specified in the order.

ESCALATION TERMS: Prices shown in this price schedule reflect the costs in effect at the time of publication. These prices will remain firm on all products with a quoted delivery of twenty—six (26) weeks or less. On products which have a scheduled delivery of more than twenty-six (26) weeks, the goods will be invoiced based on the applicable price sheet in effect at the time of shipment. In no event will the invoiced price be less than the price originally quoted.

PURCHASED COMPONENTS: (i.e. motors, gearing, etc.) Prices are quoted on the supplier's price in effect at the time of quotation. Actual invoice price will be adjusted in accordance with the supplier's escalation policy.

DIFFERED SHIPMENTS: If for any reason the customer desires to delay shipments more than 30 days after manufacturing is complete, or to place a on hold or stop to the order during the manufacturing cycle, The WALWORTH Company reserves the right to consider the order cancelled and to invoke cancellation charges per the schedule bellow.

CANCELLATION: After order acceptance by WALWORTH, items or completed orders may be cancelled and Buyer will be charged for work performed, based on the following schedule:

- Five percent (5%) of prices of stock items.
- Ten percent (10%) of price of stock items ordered in quantities which exceed normal inventory levels.
- Five percent (5%) of prices prior to drawing submittal on made-to-order items.
- 15% after drawing approval, but prior to the start of castings.
- 30% to 50% during casting cycle, depending on the state of completion.
- 55% to 75% during machining and assembly operations, depending on the state of completion.
- -100% after final assembly and test.

REMITTANCES: Remittances must be made to the address indicated on the invoice.

CREDIT TERMS: As quoted. Invoices on balances overdue will be subject to a service charge of 1 1/2 % per month on such indebtedness.

DELIVERIES: Shipments and deliveries shall at all times be subject to the approval of Seller's Credit Department. If the Buyer shall fail to make any

payments according to the terms of the contract, Seller may, in addition to and not in limitation of its other rights and remedies, at its option, cancel all or any part of Buyer's incomplete contracts with Seller, or may defer shipments of deliveries under Buyer's contracts with Seller except upon receipt of satisfactory security or for cash shipment.

All schedule of shipments are estimated as closely as possible and Seller will use its best efforts to ship within the time scheduled, but does not guarantee to do so. Schedules commence with the date Seller receives authorization to proceed with the order, subject to the provisions of the next sentence. The order will not be released for manufacture until complete specifications and approved drawings (if drawing approval is required) are received at the plant of manufacturer and the estimated schedule of shipment will commence with the date of such receipt.

Seller shall not be liable for any direct, indirect or consequential damage or loss caused by any delay in delivery, regardless of the cause of delay.

Without limiting the generality of the foregoing, Seller assumes no responsibility for delays in delivery resulting from fire, flood, accidents, riots, strikes, transportation delays, labor or material shortages, existing or future laws, acts of any governmental authority, or any other cause beyond Seller's control. Items offered from stock are subject to prior sale.

INSPECTION: Final inspection and acceptance of products must be made at the plant of manufacture, unless otherwise provided in the order and/ or in agreed upon specifications. Prices do not include charges for special tests or inspections performed at the request of the Buyer, unless called for in the order and/or in agreed upon specifications.

RETURNS: Permission in writing and return tagging instructions must be obtained from Seller before any goods returned for credit or adjustment will be accepted. Where returned goods are accepted, a minimum charge of 25% of the invoice price will be made, plus freight from both directions and costs of reconditioning the material for resale as new.

WARRANTY: Seller will replace without charge or refund the purchase price of products manufactured by Seller which prove to be defective in the material or workmanship, provided in each case that the product is properly installed and is used in the service for which Seller recommends it and that a written claim, specifying the alleged defect, is presented to Seller. Seller shall in no event be responsible for (a) claims for labor, expenses or other damages occasioned by defective products or (b) for consequences or secondary damages. THE WARRANTY STATED IN THIS PARAGRAPH IS IN LIEU OF ALL OTHER WARRANTIES, EITHER EXPRESSED OR IMPLIED. WITH RESPECT TO WARRANTIES, THIS PARAGRAPH STATES BUYER'S EXCLUSIVE REMEDY AND SELLER'S EXCLUSIVE LIABILITY.

DESIGN, ETC: Seller reserves the right to change design, materials or specifications without notice. There will be a charge for modifying an order after it has been entered when such change or modification results in additional engineering or clerical work for either The WALWORTH Company or our suppliers.

MINIMUM CHARGE: Orders totaling less than \$100.00 net will be billed at a minimum charge of \$100.00. Repair parts will be billed at a minimum charge of \$50.00.

NOTE: We reserve the right to correct obvious clerical errors in quotations, invoices, and other contracts.
